USE OF HATE SPEECH IN ARABIC LANGUAGE NEWSPAPERS
A Thesis Submitted to the
Department of Journalism and Mass Communication
in partial fulfillment of the requirements for
the degree of Master of Arts

by Sarah M. Eissa

Under the supervision of Dr. Naila Hamdy
ACKNOWLEDGEMENTS

I would like to thank everyone who helped me throughout my master’s journey, including all my professors who enriched me with knowledge and information that helped me to reach this stage, my gratitude is endless.

This would have not been done without your constant generous guidance and valuable feedback Dr. Naila Hamdy. Thank you for all your precious effort, support, encouragement and always being there despite your busy schedule.

Thank you mum for always being there (literally) and always motivating and pushing me forward. Thank you for embracing me with your love, support, and encouragement during my up and down moments. Thank you for your prayers, for bearing with my nonsense and crazy moments. I can keep going on, but thanking you will never be enough to your countless support, love and effort.

Thank you my family and siblings (Ahmad, Shaymaa, Mariam) for your constant support, motivation, and bearing with my difficult times.

Youssef, Khadiga and Mostafa thank you for being there and understanding when I am not there.

Thank you Yasmine Kasseb for your ongoing support and for your generosity in doing the coding and bearing with everything that happened in-between (I understand it was hard… really hard). Thank you so much Esraa Fayez for your generosity in doing the inter-coder reliability. Thank you Amira Hosny for your constant support, and motivation since day one, I am glad we were together throughout this journey. Thank you Mohamed Gameel for all your continuous and generous support, help, tips and advice throughout the thesis.

Thank you my reader’s committee Dr. Rasha Allam and Professor Firas Al-Atraqchi for your time, effort and valuable feedback.
ABSTRACT

This research aims to examine hate speech in the Egyptian Arabic language newspapers, through examining the front page of the three dailies, the state-owned Al-Ahram newspaper, the privately-owned newspaper Al-Masry Al-Youm and the partisan newspaper Al-Wafd. The study’s time span starts from June 30, 2012 to June 30, 2015. The analysis for the study is based on the framing and agenda-setting theories in order to find how hate speech is framed and whether the speech is affected by a governmental agenda. The research uses the quantitative method of content analysis to examine the total of 111 front pages. The research found that hate speech was used more by the privately-owned Al-Masry Al-Youm newspaper followed by Al-Wafd party newspaper, and finally by the state-owned Al-Ahram newspaper.

The major sources of hate speech were journalists who used hate speech in their own words in their writing and reporting, the major hate speech victims were Islamists followed by others and the major type of hate speech used was stereotype, and finally the media professionals generally did not try to combat hate speech.

Key words: Hate speech, Egypt, newspapers, framing, agenda-setting.

Chapter I.

INTRODUCTION

“Bread, Freedom, and Social Justice” were the theme of one of the major chants during the 25th of January 2011 revolution, when most Egyptians took to the streets to protest against an authoritarian regime. After 18 days of protests and after bloody clashes that caused injuries and took away lives, the then President of Egypt Mohamed Hosni Mubarak resigned. “Mubarak resigned on February 11, 2011” and handed power over to the Head of the Supreme Council of Armed Forces (SCAF) Field Marshal Mohamed Hussein Tantawi (Mendel, Aziz, Allam, Fattah & Mahmoud, 2013).

As Egyptians “ended Mubarak’s prolonged authoritarian rule” (Hamdy & Gomaa, 2012) many people were optimistic regarding achieving more political and social developments as well as creating a democratic life and having their demands met. However, some journalists in particular wished for a freer and more independent media. Journalism was one of the most important aspects that needed to improve (Elmasry, Basiony & Elkamel, 2014). “After thirty years of dictatorship, many thought that going forward, all of their dreams for the country would come true—including the dream of an independent media” (Abdulla, 2014).

However, these demands were not met in the media, nor in the political nor social sectors and the political turmoil has continued since then, starting with Mubarak’s handing the power over to the SCAF and electing the ousted President Mohamed Morsi, then ousting him after massive protests that took place on June 30, 2013 with the help and support of the then head of the Egyptian Military, Abdel Fatah Al-Sisi, then appointing the head of Egypt's Supreme Constitutional Court, Adly Mansour, as an Interim President and then finally
currently, ending with the rule of the elected President Al-Sisi. During all this period and under the succeeding governments, the political scene witnessed different protests, bloody clashes between protesters and security forces and the military, arrests, enforced disappearances, and many other human rights violations.

Media freedom was also negatively affected before the revolution during the ruling of different governments, which will be discussed in details later, as journalists in Egypt generally faced censorship, violations and restrictions on freedom of expression. However, journalists sometimes witnessed a margin of freedom and were allowed to criticize the government, but without exceeding certain lines and some journalists were trying to fight back restrictions and violations.

The media in Egypt currently faces unprofessionalism and as some argue, “hate speech” especially with the political turbulence and high polarization already existing. The newly discovered freedom after the January 25th revolution turned into chaotic expressions, spread of rumors and unsupported opinions (El Issawi, 2014). After the revolution, freedom of the media was very unstable and witnessed polarization and politicization (Elliott, Chuma, El Gendi, Marko, & Patel, 2016). The media became more polarized when Morsi was in power, especially between the Islamist and private or secularist media; this situation gradually deepened and was reflected on the society (Abdulla, 2014). Freedom was also affected during the rule of the different governments in power. For example, during the SCAF’s ruling period, bloggers, journalists and media institutions were subject to different violations (Abdulla, 2014). Also, during Morsi’s ruling period, there were attempts to silence; liberal news media outlets and laws were used to control opposing voices (El Issawi, 2014). Other violations were directed towards media institutions and media professionals (Abdulla, 2014). During Mansour’s and President Al Sisi’s ruling periods, the case was not different as
both media personnel and institutions faced a number of abuses (Abdulla, 2014).

Despite the fact that freedom of expression and freedom of the press are a vital part of the democratization process, it is clear that sometimes the media can be a disruptive tool that can arouse conflicts and spark violence (Elliott et al., 2016). In addition, journalism can be a tool to promote human rights; however, it can also be a tool that violates human rights when it uses hate speech (Rupar, 2012), and can also create biases and violence during war time (Hafez, 2011). For example, the media in Rwanda acted like a weapon and through spreading hate, was a major source for the 1994 genocide (Dallaire, 2007).

I.1 Statement of the Problem

Hate speech does not have a unified definition; however, different definitions were proposed, and will be discussed and analyzed later. However, a brief general definition was used in the “Glossary of Hate Speech in Egyptian Media,” a booklet that provides guidelines to media practitioners to avoid hate speech and to clarify that “criticizing individuals and groups is allowed but without incitement to violence, discrimination and/or rejecting others” (Eissa, Elias & Kasseb, 2016).

This study will examine hate speech in the Egyptian Arabic language newspapers using the quantitative approach of content analysis. The study will examine the presence or absence of hate speech, the type of hate speech that is mostly used and those who use this speech (e.g. the sources or media practitioners) as well as who the major victims of hate speech are and if they change according to the ruling government. The span of the study will be from June 2012 until June 2015. The study will analyze hate speech in a state-owned newspaper, a partisan newspaper, and an independent/private newspaper.
I.2 Significance of the Research

As hate speech encompasses different negative effects, this study is important for both academics and media professionals to enable them to know to what extent hate speech is used in the Egyptian newspapers and who the most vulnerable groups exposed to such speech are, as an initial step to help in spotting and combating this negative phenomenon, and therefore preventing the negative outcomes of hate speech.

This research is also important because a shortage in hate speech studies in Egypt exists, while some of the studies conducted, and which will be discussed in detail later mainly concentrate on a short time span like Al Sawt Al Hurr\(^1\), which examined different satellite TV channels in a period of 15 days starting from the 10\(^{th}\) to the 25\(^{th}\) of September 2013. The study’s main focus is the ethical standards and professionalism of different segments of the programs aired in the channels under examination with hate speech being among them. Similarly, MENA Media Monitoring\(^2\) research investigated hate speech in the press of different countries in the Arab region and focused on only three weeks from June 5 to 26, 2014 in Egypt.

Other research studies base their analysis on media and human rights reports and do not use scientific research, nor content analysis, nor a clear methodology and unit of analysis to spot and analyze the phenomena. For instance, Zahra’s (2014) work “I Hate You... The Hate and Sectarianism Speech in Media after Arab Spring” is mainly descriptive as it

---

1 Al-Sawt Al-Hurr is a media organization based in Cairo. It states in its website that they are partners with Al-Ahram, Al-Gomhuria, Middle East News Agency, SMEX and Free Press Unlimited. Their research is in cooperation with “Cairo Institute for Human Rights Studies” (CIHRS). For further information check [http://asahnetwork.org/en/](http://asahnetwork.org/en/)

2 MENA Media Monitoring is a Tunisian based media NGO. The part examining Egypt in their research is under the supervision of CIHRS. For further information check [http://menamediamonitoring.com/en/](http://menamediamonitoring.com/en/)
discusses other reports by human rights organizations and does not conduct a new scientific research. Similar to this, is “Hate Speech, key concept paper” presented by Elliott et al. (2016) which only reviews other studies and reports by media organizations.

Further research including surveys and in-depth interviews should be conducted to understand the effects of hate speech messages on individuals and groups targeted by those messages and understand, as well, how hate speech messages affect the audience exposed to them and the latter’s attitudes towards these messages and towards victims of hate speech.
Chapter II  
EGYPTIAN MEDIA BACKGROUND  

II.1 Egyptian Media Landscape  

The Egyptian news industry is generally divided between independent media, state-owned media that is controlled by the state, social media (Hamdy & Gomaa, 2012), and partisan newspapers (Rugh, 1987). Each one frames the news differently (Hamdy & Gomaa, 2012).

The media in Egypt has continually played a vital role in both Egypt and the Middle East (Abdulla, 2014). Egypt is the Arab country with the strongest global media influence (Elena, 2016). This is despite the fact that the Egyptian press historically fluctuated between being an independent press and being totally controlled by the state (Hamdy & Gomaa, 2012).

Historically Egypt was the innovator of the broadcast sector in the Arab world and was the first country to introduce the “first state-run radio” in 1934 (El Issawi, 2014). In 1960, the first broadcast TV was launched, while in 1970, the state became the owner of the Egyptian Radio and Television Union (ERTU), which was to control and regulate all the channels (El Issawi, 2014). Egypt was also the first country in the Arab region to launch its satellite TV channel, “the Egyptian Space Channel (ESC), on Arabsat in 1990.” Then it even launched its own satellite “Nilesat” in 1996 as a “joint public-private company operating Egyptian satellites” (El Issawi, 2014). Later in 2000, the second Nilesat was launched, then broadcasting regulations changed and this gave the chance to private Egyptian and foreign broadcasters to operate using satellites (Naomi, 2014).
II.2 Historical Background

The media was totally owned by the state after Egypt’s independence from the United Kingdom in 1952 (El Issawi, 2014). After the 1952 coup d’état by “the Free Officers,” headed by Gamal Abd El-Nasser and Mohamed Naguib, a military person was assigned to each newspaper in order to censor publications and inform journalists about what the “Free Officers” were proposing for Egypt. However, “The Free Officers were not clear about their policies” (Dabous, 1993). Censorship was sometimes lifted for short periods and imposed back, but generally Nasser’s ruling period witnessed rigid censorship (Dabous, 1993). When Nasser officially became the President, leftist journalists were active in most of the media outlets (Rugh, 1987). The media was used by Nasser “to promote his radical ideology of socialism, anti-imperialism, and Pan-Arabism” (Lohner, Banjac & Neverla, 2016).

After Nasser nationalized the media on May 24, 1965 (El Issawi, 2014), it became a tool controlled by the government “through different legal and administrative instruments.” The main role of the state-owned media was to proclaim the government’s messages and promote its regional role (El Issawi, 2014). Nasser’s ruling period was a totalitarian one (Hafez, 2008) and was aggressive against journalists, as he silenced and jailed oppositional journalists (Rugh, 1987). However, sometimes, journalists were allowed to write investigations about political issues to pretend there was freedom, but journalists were always under threat (Dabous, 1993).

The state-owned six print publishing houses, “Al-Ahram, Al-Hilal, Rose El-Youssef, Al-Akhbar, Al-Tahrir, Al-Qawmiyya Lil Tawziee,” produced “55 daily weekly and monthly print publications,” and were managed by the government (El Issawi, 2014). The mission of these publications was set by the “Press Law” which supposedly offers freedom of expression
to all opinions, but these opinions were really a propaganda tool for the government. Licenses to operate were denied to any private media outlet and governmental control of the media increased (El Issawi, 2014). Besides, political parties were closed down as were their publications (Hassan, 2013). Al-Ahram, Al-Akhbar and Al-Tahrir, prominent publishing houses, monopolized the distribution and publishing services and this allowed them to have financial advantages (El Issawi, 2014). Similarly, the broadcast sector of the ERTU was monopolized by the state. It included “30 TV stations and nine radio networks” and were run by bureaucratic practices. (El Issawi, 2014).

Unlike Nasser, Anwar Al-Sadat showed more tolerance for criticism and political discourse (Rugh, 1987). The Law of the Press was adjusted in the early seventies and allowed oppositional parties to publish their newspapers, which had extreme ideological tones, but broke the previous media monopolization imposed by Nasser’s government. However, granting a license was a special privilege and sometimes applicants never received a reply to their requests to operate (El Issawi, 2014). Party newspapers faced financial difficulties as well as problems with the government and did not have a large circulation (Rugh, 1987). However, the National Democratic Party (NDP) sponsored by Al-Sadat, and established late in 1978, published “Mayo” weekly newspaper, which favored the government, was well-financed and received exclusive information and interviews with the President (Rugh, 1987).

Similar to Nasser’s period, under Al-Sadat’s government, the state owned and supervised all media outlets and used them to support the government, while the private media outlets were illegal (Harper, 2014). In 1974, Al-Sadat’s policies towards the West were reflected in the media as he started to criticize the Soviet Union and was in agreement with the West. “Nasserites, Marxists, and other leftists in the press diminished” while
journalists previously jailed or exiled during Nasser’s ruling period were now given
responsible positions in the press (Rugh, 1987).

The government reduced restrictions on the press and some journalists went as far as
reporting cases of official corruption; they further engaged in political discourses, media
freedom, and other issues (Rugh, 1987). The censor was also no longer present in news
rooms (Hassan, 2013). In the late 1970s, the “New Wafd” opposition party newspaper was
established but suspended shortly afterwards. Opposition papers were aware that they could
not exceed the limits because they “were printed by state-owned printers and circulated by
state-owned distribution companies” (Hassan, 2013). Starting 1979, oppositional voices
flourished, but later in 1981, Al-Sadat cracked down on opposing voices and “silenced or
jailed” many critics and prominent journalists from both right and left sects (Rugh, 1987).
Only ‘Mayo’ and ‘Al-Ahrar’, a mildly oppositional paper affiliated with the rightist “Liberal
Party,” continued publication (Rugh, 1987).

As Al-Sadat’s ruling period witnessed some political freedom and press freedom, the
predominant characteristic of this period was still suppressive, but still not as far or as much
as during Nasser’s ruling period (Elmasry, Basiony & Elkamel, 2014).

II.4 Pre-Revolution Media
Media under Mubarak’s Ruling Period - (1981-2011)

After Al-Sadat’s assassination in 1981, Hosni Mubarak took power and imposed strict
control over the press as per the emergency law, but later he reduced the control when the
situation was more stable (Rugh, 1987). In the mid-1980s, Mubarak was encouraging free
speech but in the meantime, he was requesting journalists not to go too far as he criticized the
press for “agitating the mass” and “killing democracy” (Rugh, 1987). Mubarak declared that
he would not restrict media freedom and would allow the criticism of governmental officials
(Ramaprasad & Hamdy, 2006). He further released most journalists that had been imprisoned by Al-Sadat, and permitted writers that had been stopped and publications that had been banned to operate again. The New Wafd became Al-Wafd weekly newspaper and earned huge success; more independence also appeared in state-owned newspapers, Al-Ahram, Al-Akhbar, Al-Gomhouria, but these still favored the government (Rugh, 1987). “Due to indirect restrictions, government newspapers have since dominated the scene” (Davie, Dick, Bashri, Galander, Hamdy & Pierre, 2013).

Mubarak continued to control the press (Elmasry, Basiony & Elkamel, 2014), with state-owned newspaper editors in-chief being assigned by the Shura Council “and being always closely tied to the regime” to guarantee that any coverage will be biased to the government and that there will be “extensive coverage of Mubarak’s every move within the rhetoric of the supreme leader, the father guru, and the wise protector of the state and the people” (Abdulla, 2014).

However, during the mid-1990s, privately-owned newspapers started to be established (Mendel, Aziz, Allam, Fattah & Mahmoud, 2013). These introduced different ways of reporting the news by focusing on daily problems and peoples’ needs more than on governmental activities (El Issawi, 2014). Yet, getting a license to publish was hard as applicants had to “be cleared by all of Egypt's security and intelligence agencies” (Amin, 2006). Independent newspapers were also owned by businessmen endorsed by the government (Hamdy & Gomaa, 2012). Al-Masry Al-Youm newspaper was established in 2005 (Harper, 2015) and was the “first independent daily newspaper” owned by a group of businessmen. Other privately-owned newspapers followed (Cooper, 2008). Mubarak took some measures towards promoting private media and this was believed to be due to pressure from the United States, and the Bush administration after the 9/11 attacks (Cooper, 2008).
Mubarak encouraged oppositional political parties to publish their newspapers (El Shaer, 2015). As the 1984 parliamentary elections approached, oppositional newspapers played a vital role regarding economic, political and social issues since they used to criticize the government, but without directly attacking Mubarak (Rugh, 1987). In addition, journalists practiced self-censorship and avoided criticizing the army, human rights abuses and security forces, since they were exposed to governmental pressures (Amin, 2006).

Oppositional journalism was allowed to operate; however, access to governmental information, and interview requests with governmental officials were mostly refused, and this affected those newspapers’ credibility among the public (Amin, 2006). Opposition newspapers also lacked public support due to “the absence of true democratic practices and political participation,” “the high illiteracy rate in Egypt which limited the press’s reach, and the lack of trust in the political parties that published them. This limited their credibility in the eyes of the Egyptian people” (El Shaer, 2015).

Radio and television were more liberal than before, but they were still governmental mouthpieces (Rugh, 1987).

Dream TV was the first private satellite TV channel licensed by the government in 2001 and was followed with other channels, mostly owned by Mubarak’s acquaintances. These mainly aired entertainment programs and were banned from presenting news (Harper, 2014).

The introduction of private satellite television, the establishment of independent newspapers, the introduction of private media, and the availability of the Internet during the last days of the Mubarak era changed the media landscape from a one-tone media to a more divergent one (Hamdy & Gomaa, 2012). The presence of the new wealth and the divergence
in the media created vibrant but distinctive grounds between private and governmentally-owned media, between the suppression of freedom and fighting back (Hamdy & Gomaa, 2012) in addition to the almost chaotic features between the competing “official and popular voices” (Hamdy & Gomaa, 2012).

While the media scene seemed more liberalized, the government had the freedom to take away the license from media owners who crossed the limits imposed by the government (Harper, 2014). Different abuses were directed to journalism as the law allowed the government “to respond to media coverage it dislikes, with dismissal, closures of papers, fines, and imprisonment” (Amin, 2006).

Mubarak’s government used different tools to mute or at least lessen critical opinions despite the liberalization wave (Elmasry, Basiony & Elkamel, 2014). For example, the 1996 law permitted media freedom, but allowed penalties against journalists “who cross the boundaries of acceptable reporting.” These boundaries were general and were defined by the authorities (Amin, 2006). Before the January 25th revolution, the constitution protected media and speech freedom in Articles 47 and 48 but certain laws restricted this freedom and hindered journalists from working freely. Approximately 35 articles in different laws imposed penalties that went from fines to imprisonment (El Issawi, 2014). The Emergency Law further provided the tools to breach the basic freedom defined in the constitution (Amin, 2006). This law was used to control the media under the pretext “of national security or public order and tried offenders in military tribunals with limited rights to appeal” (El Issawi, 2014).

The Committee to Protect Journalists placed Mubarak among the 10 worst offenders of the press in 1999. “A series of jailings under the provisions of the Mubarak-approved press law and the censorship and closure of newspapers marked a sharp deterioration in the
climate for press freedom in his one-man 18-year rule” (Committee to Protect Journalists [CPJ], ND)

While the media was not free during this era, social media was used by citizens striving for a free space to express their different points of view (Hamdy & Gomaa, 2012).

II.5 The Media During the 18-day Revolution - (25 January-11 February 2011)

During the 18 days of the 25th of January revolution, journalists from different media outlets including “Al-Arabiya, Al-Jazeera, The Associated Press, the BBC, CBS, CNN and Danish TV” were attacked while reporting in the field. A journalist was directly murdered by a sniper (Harper, 2014).

State TV was biased, with the main background scene on TV only showing the Nile, and ignoring the fact that protesters were being killed nearby. State TV also praised Mubarak, belittled protesters and accused them of various violations and used negative descriptions including being “kids performing sexual orgies in Tahrir Square” and “being agents of foreign governments” (Abdulla, 2014). Despite this, some media professionals in state TV tried to fight back and threatened to quit if they were not allowed to cover the protests against Mubarak. In addition, state-owned media newspaper editors faced different pressures as two journalists from Al-Ahram newspaper were killed (Abdulla, 2014). When the situation seemed to be leaning towards the revolution, editors too started to change and praise revolutionaries (Abdulla, 2014). Right after Mubarak’s resignation in February 2011, the state media started to praise the new power and the revolutionaries despite its denial of the existence of a revolution (El-Issawi, 2014).

It is important to note that on the 25th of January, the government tried to block Twitter and Facebook but people found alternative ways to access them. As a result, on the
28\textsuperscript{th} of January, access to the Internet and to mobile phones was cut all over Egypt but resumed later (Abdulla, 2014).

\textbf{II.6 Post-revolution}

\textbf{Supreme Council of Armed Forces - (12 February 2011 – 29 June 2012)}

After the 25\textsuperscript{th} of January revolution, some media practitioners thought they would gain more freedom (Zahra, 2014). During the first weeks of the SCAF’s ruling period, which lasted from February 12, 2011 until June 29, 2012, they claimed that TV will broadcast with no need for security license approval. Sixteen “private satellite television channels started operating. When the Ministry of Information, which was one of the most powerful tools used by the government (El Issawi, 2014), was abolished in February 2011 (Abdulla, 2014; El-Issawi, 2014), the supporters of freedom of expression were delighted but their delight did not last long (Abdulla, 2014). Despite the change, some limitations were applied. For instance, the state media started to praise the revolutionaries and invited them to appear in interviews in the press and on TV “as long as that did not contradict the glorification of the army.” The army was also framed in a certain way as the media also portrayed it as the protector of the revolution (Abdulla, 2014).

However, everything changed later when the government started to oppose people’s dreams and the media started to favor the SCAF and defame and belittle revolutionaries. At that point, the dream for a free media diminished and the Ministry of Information was returned (Abdulla, 2014) by the SCAF on July 12, 2011 (El-Issawi, 2014).

Bloggers and journalists who dared to criticize the military were subjected to “military trials and investigations” (Abdulla, 2014). News institutions were attacked, channels were sometimes stormed and private channels fired presenters for criticizing the military such as in July 2011, when businessman and owner of Dream TV, Ahmed Bahgat,
fired Dina Abdel Rahman, talk show host, for reading an anti-SCAF article on the air (Abdulla, 2014; El Issawi, 2014). Additionally, journalists covering protests were physically harmed (Abdulla, 2014). The Committee to Protect Journalists (CPJ) stated that abuses against bloggers and journalists were more than hundreds in number (Abdulla, 2014). For example, the blogger Maikel Nabil Sanad was sentenced to three years for offending the military after he wrote an article condemning “the military for not being transparent in its decision-making” (CPJ, 2011).

It is important to clarify that Law number 313 which passed in 1956 and was amended in 1967 protected the army against questioning and limited reporting about them (El Issawi, 2014). A military editor in all media outlets was responsible for covering army-related events and he was usually approved by the military (El Issawi, 2014).

II.7 The Media under Morsi’s Rule - (30 June 2013 – 3 July 2013)

Similarly, the media during Morsi’s ruling period, which lasted from June 30, 2012 until July 3, 2013 was not in a better condition. More controls over mass media were practiced as opposed to Morsi’s promises in his election campaigns (Mansour, 2015). There was an aggressive relationship between his government, represented by the Muslim Brotherhood (MB), and private media outlets (El Issawi, 2014). Private and state media were further divided into “Islamist and non-Islamist” groups (Freedom House, 2013). The media, described as liberal, asserted that they faced attempts to mute them, while the MB government demanded media “purification” and commented that media professionals were distributing lies and inflaming anger among people (El Issawi, 2014).

The government used suppressive laws that were previously referred to under Mubarak’s government to control opposing opinions (El Issawi, 2014). A “number of court cases were brought against journalists and media practitioners for defamation of the
President” (Abdulla, 2014) and their number reached more than 20 criminal cases only within the first six months of Morsi’s presidency (Harper, 2014). Other cases brought to court were cases of defamation of the judiciary, defamation of the military, and defamation of Islam or blasphemy (Abdulla, 2014) which increased in this period (Arabic Network for Human Rights Information [ANHRI], 2013) in addition to cases of “publishing or broadcasting false news and inciting hatred” (Abdulla, 2014). During the first 100 days of Morsi’s presidency, around 40 violations targeted freedom of speech (ANHRI, 2013). During the last 100 days of his rule, “writers, journalists, newspapers and satellite channels” also faced different cases of violation and harassment (ANHRI, 2013).

Moreover, a number of journalists were attacked, kidnapped, harassed, beaten, and seized by the “regime or by regime- affiliated thugs” (Abdulla, 2014). Other abuses in Maspero included “referral to the Public Prosecution and administrative investigations for arbitrary salary deductions, suspension from work, prohibition of access to the workplace, cessation of a program or change of its identity” (El Issawi, 2014).

Similar to the SCAF and the Mubarak eras, the newly-appointed Minister of Information was considered to be the closest supporter to the Muslim Brotherhood (Mansour, 2015). Besides, control over state-media increased through the appointment of Morsi’s supporters to leading positions (Mansour, 2015). Editors-in-chief of state newspapers were appointed by the Shura Council, which was dominated by Islamists (Abdulla, 2014; Freedom House, 2013). As the MBs were trying to appoint new leaders for state media, monopolize it and manipulate its content (El Issawi, 2014), the situation was not really bright or clear for the media as many professionals were still allied with Mubarak’s government (Abdulla, 2014). Due to the shortage of supporters, the MB faced difficulty in appointing media practitioners affiliated with them from among the existing staff (El Issawi, 2014). What was
clear, however, was that loyalty to the people was absent while loyalty to the government was strong (Abdulla, 2014). The government used to interfere with the state media’s work even regarding small details. When some tried to combat this, they were penalized by the government (Abdulla, 2014). Some state media journalists were investigated for allowing oppositional voices to appear on air, for departing from the script and for covering anti-MB protests in a sympathetic way (Freedom House, 2013). However, private media was trying to condemn violations in different ways. For example, “in December 2012, five television channels and twelve newspapers went on strike on the same day to protest against Morsi’s constitutional declaration and the draft constitution, both of which curtailed media freedom” (Abdulla, 2014).

During this period, the media witnessed high polarization mainly between Islamists media outlets and secularist and private ones (Abdulla, 2014). The Brotherhoodization of the media was a major topic of discourse in state media (El Issawi, 2014). As with the Brotherhoodization of the state, the expression was highly used in secular media and indicated the fear that MB members would take over power in most of the important governmental positions (Abdulla, 2014), and would control the nation’s institutions to impose the conservative policies they embrace (El Issawi, 2014).

Another term used was “Muslim Brotherhood militias” which mainly denoted MB members who used to attack protesters in anti-governmental marches. In spite of this polarization, these channels used to conduct interviews at evening talk shows with guests affiliated with the MB in order to allow them to express their opinions (Abdulla, 2014).

On the other hand, Islamist channels rarely gave the chance to “non-Islamists” to express themselves. They described non-Islamists as Mubarak “remnants” and spies for other
countries. Islamist channels further used terms such as “atheists” against non-Islamists and suggested that anything anti-MB is also anti-Islam (Abdulla, 2014).

Journalists generally experienced harassment and violations from both the authority and MB allies, starting June 30, 2013 (Abdulla, 2014). These violations involved “chasing, detaining, and beating journalists, sometimes severely, armed robbery, shooting with birdshot and damaging cameras and equipment” (Abdulla, 2014).

II.8 The Media under Mansour’s Ruling Period – (3 July 2013 – 8 June 2014)

Some argue that after isolating Morsi, freedom of the media became as poor as during Mubarak’s era (Webb, 2014), and the media continued to serve the government and not the citizens (Abdulla, 2014). During Adli Mansour’s ruling period, from July 3, 2013 until June 8, 2014, violations continued as journalists were imprisoned, faced military trials and some were even murdered (Abdulla, 2014). It is further asserted that the year 2013 was the “deadliest” year “for journalists in Egypt.” Eight reporters were murdered during the forced dispersal of the Rabaa Al-Adawiya sit-in while four other reporters were killed in other clashes throughout the year (Harper, 2014).

State, oppositional and independent media faced restrictions and hazards (Webb, 2014). These incidents sparked fear in some journalists and reduced their ability to cover politics (Abdulla, 2014).

A few hours after ousting Morsi, violations against the media started. Some TV channels affiliated with the MB were shut down by the military. “Al-Jazeera Mubasher Misr” was stormed on-air and five employees were arrested (Abdulla, 2014). The Misr 25 channel owned by MB was also closed for inciting to violence (Harper, 2014). Some officials said that Al-Jazeera exposed the country’s national security and affairs to risk (Abdulla, 2014).
Later the court ruled that some Islamist channels including Al-Jazeera Mubasher Misr are operating illegally and do not have the required licenses, thus they ruled to have their operation banned (Abdulla, 2014). In the same month, the Freedom and Justice party newspaper, affiliated with the MB party, was closed (Abdulla, 2014). Some religious channels that were launched after the revolution and tackled politics were also closed after Morsi’s isolation. They were accused of disseminating extremism, targeting women’s rights and Christians (El Issawi, 2014) The MB depicted the opposition as being “infidels, traitors, and “fulul” [remnants of the old regime]” (Harper, 2014).

A few weeks after the isolation of Morsi, state and some private TV channels “ran a graphic banner with the Egyptian flag that stated “Egypt fights terrorism” in reference to the struggle between the new government and the MB (Abdulla, 2014). In the meantime, the majority of private and state-owned media outlets were advocating “pro-military propaganda” and extreme patriotism (Webb, 2014). Songs praising the military were continually aired in state media outlets (El Issawi, 2014).

Journalists, and especially foreigners, faced threats for simply carrying out their duties. Some were jailed, charged with terrorism or attacked by angry people due to state-owned media propaganda (Webb, 2014). According to “Cairo Institute for Human Rights Studies” (CIHRS), around 39 foreign journalists and reporters faced violations, but this figure is under-represented because some journalists refused to give their testimony (Abdulla, 2014). State TV also showed pictures and videos of these journalists and claimed that they were detained terrorists (Abdulla, 2014).

The CIHRS report (2013) stated that 205 journalists experienced violations only between “June 28 and August 30, 2013.” Around 41 percent of the cases of violence were supposedly committed by Morsi’s supporters (a total of 85 abuses) while 20 percent were
supposedly committed by the military and security forces (a total of 42 abuses), and the others were committed by citizens opposed to the MB and to Morsi (a total of 6 abuses). According to the CIHRS (2013), violations committed by the MB are greatest in number but those committed by the state were the severest. Violations, as documented in the CIHRS (2013) report only, caused death of a minimum of eight people working in the media while six of them were only performing job tasks. The majority of the violations were committed during the most violent clashes such as during the Rabaa Al-Adawiya incident and testimonies showed that all parties wanted to cover violations committed by either pro- or anti-Brotherhood supporters from the public (CIHRS, 2013).

The report finally states that around 16% of the violations targeted females working in the media (a total of 34) and 77% targeted males (a total of 158). The abuses against females were more violent than the abuses against their male counterparts. Females were harassed while being searched near MB sit-ins and threatened of being raped “as a form of sexual jihad” (CIHRS, 2013). In September 2013, thirteen journalists were still detained pending investigations, and 29 had been released (Abdulla, 2014).

CIHRS accused security forces of being responsible for at least two of these deaths, “one in the vicinity of the National Security Guards headquarters on July 3 and the other when the army shot a journalist from Al-Ahram newspaper after he allegedly failed to stop his car at a checkpoint after the curfew on August 20” (Abdulla, 2014).

Laws on freedom did not relent during Mansour’s rule and in ‘Reporters Without Borders’, on the Freedom Index, Egypt was ranked as number 158 out of 179 countries mainly for “physical attacks on journalists, for trials and for lack of transparency (Harper, 2014).”
II.9 The Media under President Al-Sisi’s Ruling Period

The former head of the Egyptian military and the current President Abdel Fattah Al-Sisi further demonstrated poor intentions in changing the state media into more democratic media (Abdulla, 2014). In June 2014, after he was elected, President Al-Sisi strengthened control over the state media and “the regime used its media control to demonize civil society organizations, foreign journalists, and the political opposition” (Mansour, 2015). President Al-Sisi’s ruling period is characterized by the silencing of those who oppose the government (Lindsey, 2017). The government induced polarization and used manipulations to limit free speech, reduced public trust in the media, and limited commercials from the media to “force them to self-censor” (Lindsey, 2017).

The overall scene of Egyptian media outlets was unprofessional as most of them were biased in their support of the government. Radio and TV programs played nationalist songs and talk shows hosts and guests praised the army (Abdulla, 2014). Some talk shows launched campaigns against activists affiliated with the revolution and described them as “traitors,” “spies,” and “agents of foreign countries. Some talk show hosts further leaked private activists’ telephone calls that allegedly prove they are not faithful to Egypt. They were further framed in a way to show that activists are not loyal to Egypt. However, these conversations did not support the claim (Abdulla, 2014).

The media did not welcome voices critical to the government and “not in total harmony with the pro-regime propaganda.” Many independent newspapers rejected articles “that failed to follow that editorial line” (Abdulla, 2014). Journalists who did not adhere to the propaganda were intimidated, silenced and punished (Lindsey, 2017). Those who reported on violations against human rights, against governmental policies or covered protests were considered “as disloyal enemies and were targeted for retribution” (Lindsey,
Some media practitioners found it difficult to perform effectively in this environment and decided to quit, like Yousri Fouda and Reem Magued (Abdulla, 2014). Self-censorship also prevailed in the media and some media outlets started to support the government or “avoided direct criticism” which limited the divergence in opinions (Mansour, 2015). On the other hand, some independent media outlets tried to voice their opinions through the Internet which is harder for the government to control, but they were still not far from harm or from abuse and violations (Lindsey, 2017). The government however tried to control the Internet by blocking 432 websites, including Egyptian and Arab news websites, between May 24th and September 13th 2017 (Freedom of Thought and Expression Law Firm [AFTE], 2017).

The Egyptian media still currently witnesses an “authoritarian media sector” and restrictions on “freedom of expression” (Abdulla, 2014). It is argued that the media is an important tool for authoritarian governments and can help in creating consent for “authoritarian governments” to stay in power (Webb, 2014). Six years after the revolution and the limited freedom of the media is still alarming (Reporters Without Borders [RSF], 2017). The different successive ruling governments that took power after the revolution restricted freedom and controlled the media (Abdulla, 2014). Currently Egypt is “one of the world’s biggest prisons for journalists” as some have been imprisoned for years “without being charged” with any violation or have not been fairly tried while others face lifelong imprisonment (RSF, 2017). In 2016, ‘Reporters Without Borders’ stated that Egypt is ranked “159th out of 180 countries” on the freedom index. It was previously ranked as 127th out of 173 countries during Mubarak’s rule but 158th out of 178 countries in 2012 and 2013 (RSF, 2016).
The media continued to be biased, and state-owned media continued to back any government in power while the private media was “influenced by wealthy owners with ties to the Mubarak government. Severe polarization between Islamist and non-Islamist media outlets” existed (Abdulla, 2014). Media independency from the government was further questioned in the “post-Brotherhood rule” for its propaganda and for its praise of the military by both state-owned and private media (El Issawi, 2014). “The Egyptian press is not, by any means, an independent Fourth Estate” despite the fact that the press showed diversity and occasional criticism of the changing political environment and of the governmental attempts to use journalists to control public opinion (Rugh, 1987).
Chapter III
LITERATURE REVIEW

III.1 Hate Speech Definitions

Hate speech can result from either suppressed hostility or from ignorance, which is rooted within the shortage of appropriate education (Sevasti, 2014). Ignorance “is the original reason that makes people susceptible to nationalism and to an authoritarian mentality and therefore to hate speech,” as cited in Sevasti.

Defining hate speech is challenging as there are various definitions, as well as a shortage of agreement on its content (Sevasti, 2014). It is a wide general term that denotes a number of “negative discourses” that provoke aggression (Sikorskaya & Gafarova, 2014). Its meaning passes through incitement to violence, incitement to kill, to isolate others and to discriminate against them (Zahra, 2014). Hate speech uses dehumanization towards others in order to rationalize discrimination, isolation, and rejection of other groups. Dehumanization takes the form of attacking other individuals or groups’ dignity as well as rationalizing and justifying injurious actions against them (Roginsky, & Tsesis, 2016). Likewise, Matsuda defined hate speech as “words that wound” (Ianto-Petnehazi, 2012). Hate speech is mainly the outcome of communications that lower peoples’ equality, violates human rights and insults their dignity (Elliott et al., 2016). It takes different forms and can be provoked by all types of apparent differences (Sevasti, 2014). In the “Glossary of Hate Speech in Egyptian Media,” a brief general definition was used in order to help avoid hate speech, indicating that “criticizing individuals and groups is allowed, but without incitement to violence, discrimination and rejection of others” (Eissa, Elias & Kasseb, 2016).
Hate speech generally refers to articulations that “attack” other individuals based on their “race, nationality, religious identity, gender, sexual orientation or other group membership, where this group membership is a morally arbitrary distinguishing characteristic” (Yong, 2011). A similar general definition of hate speech states that it is the speech that arouses hostility or marginalization of individuals based on their association with certain groups (Elliott et al., 2016).

Hate speech is defined by “The International Encyclopedia of Communication” as a “form of verbal aggression that expresses contempt, ridicule, or threat towards a specific group or class of people” (as cited in Ianto-Petnehazi, 2012).

Another definition by Lenkova (1998) states that hate speech is “the use of very precise discriminatory and selective vocabulary which tries to legitimize negative thinking about all those who are not “us”, those who are the “others” (as cited in Sevasti, 2014). In addition, Simpson (2013) defines hate speech as a term “of art in legal and political theory.” It indicates spoken conduct and other symbolic, communicative action, which intentionally conveys deep hostility targeting individuals or groups based on associating them with some groups commonly identified through “ethnicity, religion, or sexual orientation” (Simpson, 2013). Therefore, hate speech consists of “identity-prejudicial abuse and harassment, certain uses of slurs and epithets, some extremist political and religious speech such as statements to the effect that all Muslims are terrorists, or that homosexuals are second-class human beings as well as certain displays of ‘hate symbols’ such as, for example, swastikas or burning crosses (Simpson, 2013).

It is important to note that slurs are not always considered hate speech, but this depends on the context of the uttered words. Croom (2014) questions how slurs could offend a large number of people while its context might differ. Some slurs such as “nigger or
faggot,” among others, are considered hate speech as they are usually used to belittle some groups based on their “racial or sexual identity” (Croom, 2013 & 2014). Slurs are also sometimes considered as a way of expression. Croom (2013) elaborates further through explaining three types of expressions: “descriptive, expressive, and slurring.” Calling someone an “African American” is a descriptive term that describes certain racial groups. Other terms like calling someone with a certain insult is considered expressive as it is sometimes used to express anger but, without mentioning sex or race or any other descriptive characteristics. On the other hand, a term like “nigger” is considered as slurring because it targets a member of certain groups with the intention of offending them based on their descriptive features (Croom, 2013).

Similarly, another definition of hate speech implies that it usually includes wordings that take any form of humiliation to any racial, “religious, ethnic, or national group” (Sikorskaya & Gafarova, 2014). This wording can take place in the “form of racism, xenophobia, inter-ethnic hostility or intolerance as well as instigating violence, hatred or discrimination” (Sikorskaya & Gafarova, 2014). Homophobia, sexism, discrimination against gender and other types of hate were included in the concept of hate speech in the 80s of the last century (Sikorskaya & Gafarova, 2014).

Moreover, the ‘Encyclopedia of Political Communication’ defines hate speech as “the use of words as weapons that terrorize, humiliate, degrade, abuse, threaten, and discriminate others based on race, ethnicity, religion, sexual orientation, national origin, or gender” (as cited in Ianto-Petnehazi, 2012).

Ring (2013) defines the word ‘hate’ separately as a connotation of undesirable thoughts and opinions about individuals, groups or their representatives because of their “race, ethnicity, religion, gender or sexual orientation” while hate speech is all types “of
expressions that spread, incite, promote or justify racial hatred, xenophobia, anti-Semitism or other forms of hatred based on intolerance, including intolerance expressed by aggressive nationalism and ethnocentrism, discrimination and hostility against minorities, migrants and people of immigrant origin” (Ring, 2013). These definitions are based on “the Council of Europe’s Protocol to the Convention on Cybercrime” (Ring, 2013).

As shown by these definitions and according to Elliott et al., (2016) hate speech definitions are endless and challenging, as there are controversies between classifying injurious speech that holds the possibility of arousing hostility and marginalizing groups or individuals and the speech used to participate in debatable issues. Besides, what might be considered as hate speech to one person might be considered as an opinion to another (Zahra, 2014). Therefore, having a concrete definition of hate speech will provide “complex philosophical discussions on the meaning of belonging, freedom of expression and dignity” in a certain society and culture (Elliott et al., 2016). In addition, hate speech can be designed and influenced “by unique media landscapes in specific country contexts” especially with the increasing usage of social media. Consequently, investigations of hate speech depend on the context (Elliott et al., 2016).

III.2 Is Hate Speech Free Speech?

Despite the fact that hate speech is considered as a negative aspect according to its different definitions, there is an ongoing debate on whether hate speech should be combated by governments or should be considered part of the freedom of speech. The term ‘freedom of speech’ is used interchangeably with “freedom of the press” or “freedom of expression” (Elliott et al., 2016). The terminology is used within discourse communications, which are mostly political, and can be communicated without censorship from the state (Elliott et al., 2016). These kinds of freedom can either be verbal, written, or can simply be ideas expressed
through any form including art (Elliott et al., 2016). Therefore, freedom of expression is transmitted through different channels such as “print, visual, broadcast, and online media” (Elliott et al., 2016).

Freedom of speech is further protected by the “Universal Declaration of Human Rights” which states in Article 19 that “everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers” (United Nations [UN], ND). However, the declaration also protects individuals and groups against discrimination.

The debate between hate speech and freedom of speech became obvious when some speech intentionally degraded individuals on the basis of belonging to certain “socio-economic, demographic or political group” (Elliott et al., 2016). Since then, debates on whether to impose limitations or to encourage freedom of speech and consider hate speech a kind of freedom of expression have started (Elliott et al., 2016), including whether this speech affects people or groups’ dignity which is protected by the “Universal Declaration of Human Rights” (Elliott et al., 2016). The Declaration stated in Article One that “all human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood” (UN, ND). The UN further provides an explanation that dignity is hard to be positioned in a physical form, but the article denotes that people should “treat each other with respect, tolerance and understanding.”

The argument between hate speech and freedom of expression is essentially triggered due to the vagueness between opinions and violations of dignity (Elliott et al., 2016). Additionally, the controversy on limiting hate speech is partially due to the opposing ideas.
between the libertarian and egalitarian approaches within the arena of liberal beliefs (Brink, 2001).

Sikorskaya and Gafarova (2014) explain two aspects regarding hate speech limitations and the overlap with freedom of speech. The first aspect indicates that if obligatory limitations are applied to the speech content, it can harm the essential right of freedom of expression while the second aspect indicates that those in favor of applying limitations on hate speech believe that “freedom of speech is not absolute.” This claim is supported by Article 19 of the (ICCPR) convention. It asserted that the right of freedom of speech could be faced by limitations due to the speech’s “special duties and responsibilities” (Sikorskaya & Gafarova, 2014).

Similarly, the egalitarian perspective might appear to place boundaries on freedom of expression (Brink, 2001). It is suggested that hate speech should be combated like other types of discrimination because it causes social disagreements and hostility and because it is offensive to its victims for its embracing discriminatory approaches with “long, ugly, and sometimes violent history” (Brink, 2001). As cited in Yong (2011), Schauer (1982) cautiously supports this opinion by saying, “under a Free Speech Principle, any governmental action to achieve a goal... must provide a stronger justification when the attainment of that goal requires the restriction of speech.” One of the situations among others that might justify imposing regulations on free speech is the requirement of “respect of the rights or reputations of others” (Sikorskaya & Gafarova, 2014). Another argument states that if hate speech is considered as freedom of expression, people using it will be encouraged to use it more and might use physical violence against groups targeted by such speech (Ianto-Petnehazi, 2012).

Ianto-Petnehazi (2012) mentions Barendt’s opinion that free speech should be regulated to protect public peace and to protect individuals exposed to hate communication
from psychological harm. In addition, allowing hate speech would cause the government to tolerate racist groups and their attitudes. Hence, placing boundaries on freedom of speech is a right for the society to show their disgrace against hate speech (Ianto-Petnehazi, 2012).

Likewise, Jeremy Waldron, legal philosopher, believes that for a society to function in an ordered way, all its members should be secured by law and should live feeling assured and supported by this security (Ring, 2013). Therefore, limiting hate speech will help people to live in a peaceful way and ethnic relations will improve (Ring, 2013).

Conversely, a libertarian approach might appear to be limiting equality. “The cure might seem at least as bad as the disease,” Sevasti (2014) explains Brink’s (2001) argument that “offensive ideas” is a price paid for defending constitutional rights. Therefore, preventing and limiting “hate speech might bring equality but it would affect liberty. Similarly, such limitations bring up new classifications that support the notion that freedom of expression opposes the fundamental values of democracy (Sikorskaya & Gafarova, 2014). A similar argument by Cornwell and Orbe (1999) states that attempts to prevent and limit hate speech would lead to censorship (Sevasti, 2014).

It is also important to note that arguments for banning hate speech might be used by dominating groups in a society and by some governments to prohibit speech that they do not like (Ianto-Petnehazi, 2012). This idea supports the libertarian approach and leads to the argument that more speech will solve the hate speech problem (Ianto-Petnehazi, 2012). Correspondingly, Brink’s argument indicates that the right way to respond to hate speech is having more speech and not restricting it.

This notion is supported by the argument of a “marketplace of ideas” that is proposed by John Stuart Mill (Ring, 2013). This is similar to the “open market” idea and argues that
opinions and views should not be rejected and should be debated to avoid governmental limitations (Ianto-Petnehazi, 2012). This argument is mainly directed against censorship and states that it is better to know the ideas instead of muting them (Ring, 2013). Besides, censorship would restrict finding the truth and limit the marketplace of ideas (Ring, 2013). Some scholars argue that truth would be more vivid when it clashes with error (Ring, 2013). Truth is, further, the basic element for social and political developments according to the legal scholar Zachariah Chafee (Ring, 2013). In addition, limiting hate speech might intimidate some people from speaking about “sensitive” issues like “racial differences in response to medical treatments” (Delgado & Stefancic, 2009).

Oliver Wendell Holmes believes that the best ideas among “favorable and unfavorable” ones will arise when both types of ideas compete (Ring, 2013). According to Ring (2013), Chafee and Holmes believe that when the best ideas arise they will instantly be accepted and used to lead the “favorable” development of the society.

However, Brison criticizes the marketplace model and argues that assuming that “good ideas” in a society will arise and will demonstrate the irrationality of hate speech is not possible (Ianto-Petnehazi, 2012). C. Edwin Baker supports Brison, as people do not have equal access to the marketplace and therefore the ideas of people with more limited access to the media will not be widely disseminated, accepted and acknowledged (Ring, 2013). Because “bad ideas” are mainly directed towards minorities, then there will be a shortage in “good ideas” (Ianto-Petnehazi, 2012). In addition, hate speech can silence women and minorities who are targeted by such speech, and therefore might restrict speech for certain groups. Consequently, it is important to prevent hate speech to create space for public debates where everyone’s voice can be heard without fear (Ring, 2013). Delgado and Stefancic also argue that the “marketplace of ideas” leads to marginalizing minorities who are already weak
and do not have access to the media and it mainly benefits the majority, as their ideas will dominate the market (Ianto-Petnehazi, 2012). This means that the marketplace of ideas will not succeed until individuals and groups have equal access to mainstream media and different opinions get the chance to be represented (Ring, 2013).

As freedom of speech takes different forms, either political, artistic or symbolic and is disseminated through different channels, laws and regulations are not sufficient to fight hate speech (Zahra, 2014). Some scholars such as Alexander Meiklejohn and Owen Fiss believe in self-governance rather than regulations and believe in absolute freedom (Ring, 2013). Similarly, Baker believes that freedom of speech including hate speech is important in order to achieve “self-fulfillment” and to guarantee that everyone in the society is contributing to the change (Ring, 2013). Likewise, Delgado (1987) believes that laws might only discourage some people from using hate speech, but will not necessarily limit it.

Others argue that protecting hate speech acts like a “bellwether for racism” which suggests that if hate speech is prevented then people will not be aware that racist and negative opinions exist and will assume that no racism exists while it is only hidden (Ring, 2013).

There are different suggestions to combat hate speech while avoiding governmental limitations that might harm freedom of speech and impose censorship. According to Sikorskaya and Gafarova (2014), most of the experts believe that hate speech must be encountered by another kind of speech that aims both to inform the audience and eliminate deception and bias and to “overcome the enemy image and destroy stereotypes, thus changing public opinion voluntarily” (Sikorskaya & Gafarova, 2014).

Zahra (2014) suggests creating media civil society associations that aim to expose media outlets and individuals adopting hate speech, by using strict scientific methods and
then publishing and disseminating their results to the people. He adds that it is important to raise awareness on human rights and considers it as an educational topic to be taught in schools. This suggestion is supported by Lenkova who explained that hate speech is the result of ignorance rooted in the lack of an appropriate education.

Media practitioners should also learn about human rights and should receive training on how to differentiate between freedom of speech and hate speech, which will help them to avoid the usage of hate language (Zahra, 2014). According to Zahra (2014), the media has a role to play in order to combat this phenomenon by providing time and space to encourage cultural debates and the acceptance of others opinions. Additionally, the media should have clear standards on its messages to avoid hate speech (Zahra, 2014).

While these debates are ongoing, in accordance with the presence of a challenge on limiting hate speech since it might mean applying limitations on free speech (Ianto-Petnehazi, 2012) the fact is that there are more leaning towards preventing and combating hate speech and therefore placing boundaries on freedom of expression (Sikorskaya & Gafarova, 2014). Limitations on hate speech might be motivated by social disapprovals or legal sanctions (Sikorskaya & Gafarova, 2014). However, some “international initiatives” were established to find solutions for expressions that may provoke hate in the media (Sikorskaya & Gafarova, 2014). The criteria for limitations differ from one country to another regarding the forms of expressions, prohibitions and punishments (Sikorskaya & Gafarova, 2014).

III.3 US. and European Regulations

The preceding debate continues even within the constitution and the legislations on speech in different constitutions. It is important to examine the American constitution and laws and comprehend their relationship to freedom of expression and hate speech, as America is known to be the “land of freedom.” Besides, most of the literature on hate speech
is derived from the American perspective and therefore, all inquiries on the limitations of hate speech concern the American constitution (Simpson, 2013). A brief overview on freedom of expression and hate speech in European countries is presented and discussed as it is generally argued that European countries respect freedom more than their Middle Eastern and especially their Egyptian counterparts.

Hate speech presents a number of difficulties in the current constitutional “rights to freedom of expression” (Rosenfeld, 2003). Similar to the argument for imposing limitations on hate speech and its effects on freedom of expression, some disagreements arise within the American constitution.

On the one hand, some believe in the strict primacy of protecting free speech according to the First Amendment (Simpson, 2013) which is part of “the Bill of Rights” and which states that “Congress shall make no law regarding an establishment of religion, or prohibiting the free exercise thereof, or abridging the freedom of speech, or the press, or the right of the people to assemble, and to petition the government for a redress of grievances” (United States, 1990). Therefore, hate speech is highly protected by the US. constitution (Rosenfeld, 2003) to the extent of considering “extreme racist speech” as well as burning crosses (Bleich, 2014) as free speech, as shown by various decisions by the Supreme Court (Ianto-Petnehazi, 2012). According to this, there are no convictions for racist expressions unless the wording inflames instant violence or forms a direct threat (Bleich, 2014). Such harm is decided by the “legal community” depending on the average person’s standards and values and each case is looked at separately (Leets & Giles, 1997). Other exceptions made by the court also include cases when hate speech generates a hazard of illegal action, when it consists of fighting words, when it is explicit, and includes defamation, false information or misleading advertisements, and “the government can demonstrate compelling interest” (Leets
& Giles, 1997). However, all these exceptions might not be applicable and are restricted as they could be considered vague or could fall under the Overbreadth Doctrine (Leets & Giles, 1997).

On the other hand, the argument for absolute freedom is criticized as the demands of the “First Amendment’s must be balanced against the socially egalitarian aspirations of the Fourteenth Amendment” (Simpson, 2013). This Amendment is against discrimination and favors preventing any ethnic inequality, as it stipulates that no state shall “deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws” (as cited in Ring, 2013). However, it is important to note that despite the fact that hate speech is protected by the first amendment, each hate speech case is dealt with separately through a court decision (Ring, 2013).

Despite many arguments, freedom of speech in the US. is generally a persistent right more than in other constitutional democracies (Rosenfeld, 2003). The strong preference of the libertarian approach over the egalitarian approach is among the reasons that prioritize free speech in the US. (Rosenfeld, 2003). Furthermore, when comparing the US. constitution with that of other European countries, some disparities become clear (Rosenfeld, 2003), as both systems have established different approaches to control hate speech. In the 1960s, the USA started to place more protection towards hate speech while European countries started to penalize it (Bleich, 2014).

The line between freedom of expression and hate speech is mainly decided by high courts in the USA and Europe. Since human rights laws do not consider freedom of speech as an absolute right, this freedom can be limited by different international protocols (Elliott et al., 2016) which include “the International Covenant on Civil and Political Rights (ICPPR), the American Convention on Human Rights (ACHR), and the European Convention for
Human Rights (ECHR)” (Elliott et al., 2016). However, those focusing on discrimination abide by Article 20(2) of the ICPPR which states: “Any advocacy of national, racial or religious hatred that constitutes incitement to discrimination, hostility or violence shall be prohibited by law” (as cited in Elliott et al., 2016). More articles that aim to fight discrimination are included in the “the International Convention for the Elimination of All Forms of Racial Discrimination” document (Elliott et al., 2016).

“The European Court of Human Rights” was created to impose “the 1949 European Convention on Human Rights (ECHR)” (Bleich, 2014). Since the 1960s, the ECHR has imposed major rulings on free speech. Also, due to the expansion of the Council of Europe’s membership, the power that the court holds in making judicial decisions on freedom of expression on the national level now covers almost the whole continent (Bleich, 2014).

Unlike the protection allowed to hate speech in the US. constitution, “modest legal restrictions on hate speech are well-established’ in European states “and are not as vigorously contested as in the US” (Simpson, 2013). Hate speech is generally protected in the USA with only some exceptions and is prohibited in Europe. In addition, in Europe, freedom of speech is balanced against other rights and protections (Iantò-Petnehazi, 2012). Provoking racial hatred is considered as a threat and might be criminalized according to most of the European jurisdictions, to the extent that if a book inquired about the existence of the holocaust it will be considered hate speech (Bleich, 2014). For example, Germany fights and restricts any speech that denies the Holocaust and this blurs the line between opinion and fact and raises concerns over the limitations on academic freedom (Rosenfeld, 2003). Within these restrictions of hate speech, the European jurisdiction is still considered as highly respectful of freedom of expression (Bleich, 2014).
Both US and Europe are also currently trying to fight online hate messages and pressured social media platforms to fight “extremist content”; therefore, social media platforms were removing 99 percent of content associated with extremist militant groups (Fioretti, 2017). There are trials by the European Commission to combat online hate speech, through the “Code of conduct on countering illegal hate speech online” (European Commission, 2017). The union agreed with the IT companies “Facebook, Microsoft, Twitter and YouTube” to fight online hate speech by removing it.

The European Commission defined Illegal hate speech as “combating certain forms and expressions of racism and xenophobia by means of criminal law and national laws transposing it, means all conduct publicly inciting to violence or hatred directed against a group of persons or a member of such a group defined by reference to race, color, religion, descent or national or ethnic origin” (European Commission, 2017). While trying to fight hate speech the European Commission and the IT Companies reinforced protecting freedom of expression. The code of conduct is a way that “help users notifying illegal hate speech” in the social platforms, the IT companies review the notification and assess hate speech then they remove or disable access to the illegal hate content within 24 hours. IT companies will also raise awareness and inform social platform users on the prohibited content (European Commission, 2017).

Unlike the American constitution, the Canadian constitution applies restrictions on speech, in order to protect youngsters and individuals’ personal dignity, especially because Canada is a multicultural country (Rosenfeld, 2003). The Canadian approach further focuses on the consequences of threats that might be implemented from hate speech in the long term and not only those threats made during moments of instant violence (Rosenfeld, 2003).
Germany limits hate speech through enforcing different legal systems, including civil and criminal laws to protect against slur, libel and oral offenses such as “attacks against a person's honor or integrity, damage to reputation, and disparaging the memory of the dead” (Rosenfeld, 2003). The German “Basic Law” also balances between freedom of speech and dignity. The constitution creates equality between the duties and rights of citizens on one side and those of the government on the other side (Rosenfeld, 2003).

“Criminal liability” in the German law is considered to refer to “incitement to hatred, or attacks on human dignity against individuals or groups determined by nationality, race, religion, or ethnic origin” (Rosenfeld, 2003).

The UK is different as it does not have a constitution but it acknowledges freedom of expression through its devotion to “international covenants, such as the European Convention on Human Rights, and through commitment to constitutional values inherent in its” tradition of the rule of law (Rosenfeld, 2003). Besides, the UK has outlawed hate speech since the 17th century (Rosenfeld, 2003). Its freedom of speech regulations has changed over time starting with “reinforcing the security of the government and ending with protecting targets against racially motivated harassment” (Rosenfeld, 2003).

Rosenfeld (2003) cites some examples of hate speech and concludes that as hate speech is not similar in general, its consequences and relevant court decisions also differ depending on the situation. Furthermore, the effects of hate speech differ according to the medium it was communicated through. For example, verbal communication directed to a small audience will not be the same as messages posted on the Internet and disseminated to a worldwide audience adding that non-immediate harms yielded by hate speech are difficult to measure (Rosenfeld, 2003). One of the reasons for such difficulty is that the connotations and the extent of harm of the messages vary from one listener to another and according to the
context itself (Leets & Giles, 1997). In addition, emotional and psychological harm are hard to measure (Leets & Giles, 1997).

While there are disparities between the US and other Western countries’ approaches towards hate speech, each approach implemented by those countries has advantages and disadvantages (Rosenfeld, 2003).

For example, the major benefit of the approach implemented by the US. is having a clear line between legitimate and illegitimate speech while the major disadvantage is that it is not tailored to deal with harms that might result from hate speech in the long term (Rosenfeld, 2003). Also, the approach used by the US. does not pay attention to the harmful effects of hate speech on its victims’ dignity and the attitudes and beliefs people might embrace from such speech (Rosenfeld, 2003).

III.4 Hate Speech and International Treaties

Freedom of expression is an important asset that is protected by the “major international covenants of human rights” such as the 1984 U.N. “Universal Declaration of Human Rights,” the 1966 “United Nations Covenant on Civil Right and Political Rights” (CCPR), and the 1950 European Convention on Human Rights (ECHR),” all embraced after the second World War (Rosenfeld, 2003).

However, these covenants place some boundaries on freedom of speech in order to combat hate speech like the CCPR (Rosenfeld, 2003). Article 19 of the CCPR stresses on freedom of speech but still places restrictions to be reinforced by law for the “respect of the rights or reputations of others, for the protection of national security or for public order, or for public health or morals” (United Nations [UN], ND).
In Article 20, the covenant states that “any propaganda for war shall be prohibited by law and any advocacy of national, racial or religious hatred that constitutes incitement to discrimination, hostility or violence shall be prohibited by law” (UN, ND).

In addition, Article 26 states that the law should forbid discrimination and ensure equality “and guarantee to all persons equal and effective protection against discrimination on any ground such as race, color, sex, language, religion, political or other opinion, national or social origin, property, birth or other status” (UN, ND).

Moreover, “Article 4 of the 1965 International Convention on the Elimination of All forms of Racial Discrimination (CERD) condemns all types of discrimination and declares discrimination to be punishable by laws (UN, ND).

The Universal Declaration of Human Rights stresses on the freedom of expression and further states in Article 7 that all people “are equal before the law and are entitled to equal protection of the law without any discrimination.” All are entitled to equal protection against any discrimination in violation of this Declaration and against any incitement to such discrimination” (UN, ND). Another protection to people against hate speech is in Article 29 of the Declaration which states that individuals’ rights and freedom can be subject to limitations by law for the reason of safeguarding and respecting others’ freedom and rights and to meet the impartial requirements “of morality, public order and the general welfare in a democratic society.”

The ECHR highly protects people’s freedom and includes different aspects of this freedom such as freedom of thought and religion, freedom of expression and peaceful assembly and so on in Articles 9, 10, and 11. However, similar to the ICCPR, it places some boundaries within this freedom by stating, in part two of Article 10:
The exercise of these freedoms, since it carries with it duties and responsibilities, may be subject to such formalities, conditions, restrictions or penalties as are prescribed by law and are necessary in a democratic society, in the interests of national security, territorial integrity or public safety, for the prevention of disorder or crime, for the protection of health or morals, for the protection of the reputation or rights of others, for preventing the disclosure of information received in confidence, or for maintaining the authority and impartiality of the judiciary. (ECHR, ND).

Article 14 further clearly states that practicing freedom should be applied without any practice of discrimination. The Article states that

The enjoyment of the rights and freedoms set forth in this Convention shall be secured without discrimination on any ground such as sex, race, color, language, religion, political or other opinion, national or social origin, association with a national minority, property, birth or other status. (ECHR, ND).

### III.5 Freedom of Speech and Laws Combating Hate Speech in Egypt

Similar to the American constitution, the Constitution of The Arab Republic of Egypt 2014 guarantees freedom of expression in Article 65. Besides, Article 67 also protects this freedom and indicates that “no lawsuit may be initiated or filed to stop or confiscate any artistic, literary, or intellectual works, or against their creators except by the Public Prosecutor. No freedom- restricting sanction may be inflicted for crimes committed because of the publicity of artistic, literary or intellectual product.” However, the Article imposes more limitations and states that “for crimes related to the incitement to violence, discrimination between citizens, or impingement of individual honor, the Law shall specify the penalties” (State Information Service, ND). This article might be used as a tool against hate speech as it includes discrimination, incitement to violence, infringing others’ honor, but
it is general and could be abused to limit freedom of expression by the government.

In addition, guaranteeing media freedom in the constitution does not mean that such freedom is practiced. The government of Egypt uses laws such as “emergency laws and articles from the penal code” to hinder freedom of expression and censor media content, which gradually caused self-censorship and created “redlines” on sensitive topics (Abdulla, 2014).

There are generally no specific laws against hate speech in Egypt (Elliott et al., 2016). However, Article 51 of the constitution indicates that “dignity is the right of every human being and may not be violated. The State shall respect and protect human dignity.” It also focuses in Article 53 on equality between citizens with no discrimination between them. It also states that “discrimination and incitement to hatred is a crime punished by Law” (State Information Service, ND).

Besides the constitution, the “Press Charter of Honor” of journalists issued by the “Egyptian Supreme Council of Press” in 1998 declares in its general principles that journalists should respect the dignity of other people as well as women and minorities’ rights. It also asserts that journalists are professionally obliged not to call for discrimination, extremism, nor incite to hate religions, nor call for discrimination, nor for belittling any sect of the society. The same is further stated in Article 20 in the press law (Supreme Council of the Press, ND).

Despite the absence of laws against hate speech, there are other laws against certain acts such as “religious blasphemy” which “is an offence under the Penal Code.” However, since this law “protects Judaism, Christianity, and Islam” only (Elliott et al., 2016), it is criticized for being discriminatory itself as it ignores protecting other beliefs such as Shia, Baha’ism, Atheism and so on (Ezzat, 2014). It is also argued that it is discriminatory against
Christianity and Judaism too because, in practical terms, only Islam is protected against slurs or criticism, unlike what its text implies (Elliott et al., 2016).

While some believe that extreme religious criticism is free speech as long as it does not incite to violence against a group of people, others believe that it might cause hate and hostility on religious bases (Ezzat, 2014). Anyhow, this law is considered to be limiting freedom of expression and speech, opposing international conventions and failing to protect minorities and marginalized groups (Elliott et al., 2016; Ezzat, 2014).

According to the penal code, “Hate speech may sometimes be prosecuted if it includes incitements to commit a crime,” but offences must take place or it will not be penalized (Elliott et al., 2016). Besides, the Penal code definition to incitement is too broad, it can include incitement for murder, for toppling the regime, for disobedience of orders by soldiers, for discrimination and for violating laws. However, according to the penal code these incitements are not penalized because they do not include offences (Elliott et al., 2016). In addition, this Penal code can be used to limit freedom of speech due to its broad definition (Elliott et al., 2016).

Due to the absence of a concrete definition of hate speech, Egyptian laws are used to restrict freedom of expression and not to limit hate speech (Elliott et al., 2016).

However, recently there are some attempts in Egypt by Al-Azhar “the world’s oldest Sunni institute of Islamic learning” to criminalize hate speech, focusing on hate speech against religious beliefs (Ahram online, 2017). Al-Azhar drafted a law named “combating hate and violence conducted in the name of religion” and it consists of 16 articles. The following paragraphs is an overview of the draft law and some of its articles, and it is not literal translation of the draft law’s Arabic version, but mostly an overview and explanations of it.
As the drafted law is new there is shortage of literature discussing it. However, it is criticized by Ezzat (2017) for leaning towards limiting freedom of belief and freedom of expression and is more into controlling religious speech and is scattered away from combating hate speech, incitement to discrimination and violence. The law defines the term “Religion” as Judaism, Christianity and Islam (Al-Azhar, 2017). Therefore, the draft law is criticized for excluding other beliefs (Ezzat, 2017). “Dr. Ashour Abdelrahman, a professor at the Sharia and Law College of Al-Azhar University in Tanta and a member of the committee who worked on the draft” said in an interview with Egypt Today that “This is a misunderstanding of the law…preventing hate speech towards religions and believers of these religions who constitute about 95 percent of Egyptian society does not mean that we allow hate speech towards others” (as cited in Ismail, 2017). But, this however is still not clarified in the draft law itself.

The draft law defines hate speech in Article one, that it is any statement, attitude, or public conduct that incites for violence or motivates social strife (Al-Azhar, 2017). This Article is criticized by Ezzat (2017) for being too broad.

The law defines discrimination as any differentiation between individuals or groups based on religion, belief, faith, sect, ethnicity or color (Al-Azhar, 2017). One of the draft law’s different aims is to gain equality by law, to protect freedom of belief and accept “the other.” According to the proposed law Articles it also protects against mocking others’ beliefs or Holy Books, God and prophets (Al-Azhar, 2017).

The draft law assures in Article three that it does not conflict with the fact of the existence of the differences between religions, and it does not conflict with the freedom of scientifically researching in religions. This however contradicts with Article six (Ezzat, 2017). Which states that the law prevents discussing debatable creeds publicly in the media in
a way that might inflame violence between those creeds believers (Al-Azhar, 2017).
Abdelrahman, states that “criticizing such books is not prohibited as long as it is presented in a reasonable and respectful way that does not provoke intolerance or hatred” (as cited in Ismail, 2017). However, Article six shows that violence among creeds believers is an inevitable effect or at least predictable if debatable religious issues are discussed and the wording “might inflame violence” does not include incitement to violence or calling for discrimination, which is considered shortage in how the Article is phrased (Ezzat, 2017).

The draft law also prohibits in Article eight publishing or re-publishing news, photos, interviews, in any audiovisual or print media that might incite for hatred, increases it, reinforces it or strengthen it. This Article is criticized by Ezzat (2017), for being too broad especially the term “might incite for hatred” which might lead to violations against religious freedom of expression.

In Article nine the draft law also prohibits any conduct that might discriminate against people living in the society or disseminate discriminative ideas (Al-Azhar, 2017).

Ezzat (2017), criticize the draft for repeating some Articles that is already used in the Penal Code. For example, Article seven prohibits disdaining or inciting to disdaining God or the prophets through any media outlet and forbid disrespecting or attacking any religious scriptures by changing, damaging or defiling them. This is a replication of the blasphemy Article 98 in the Penal Code and Articles 160 and 161 that are related to attacking religious scriptures by changing, damaging or defiling them. Article seven further has negative implication, according to Ezzat (2017), as the blasphemy law was used to restrict ideas that criticize the majority of Sunni Islam.
Finally, the draft law states in Article four that freedom of expression, media freedom, freedom to criticize, publication and creativity should not be taken as a pretext to contradict with the law Articles (Al-Azhar, 2017).

### III.6 Hate Speech in the Media

Hate speech is present in different countries within the different media used. For example, “the European Monitoring Centre on Racism and Xenophobia (EUMC)” in Vienna conducted a “comparative research on media and racism” (Hafez, 2011). The results showed that the portrayal of foreigners and migrants is distorted. Hafez (2011) explained that despite living in a globalized world, this did not positively affect the way Muslims and Islam are viewed stereotypically in the west.

As mentioned before by Ezzat (2014), religion and hate speech are among the debatable issues as it is argued whether “hate speech against religious groups or criticism against religion” is hate speech or not. However, this differs according to the culture and the country. For instance, the sarcastic Islamic cartoons published in the Charlie Hebdo French magazine are considered by the Al-Ahram state-owned Egyptian newspaper as disrespectful of religion and abusive of freedom of speech (Elliott et al., 2016). Different articles in Al-Ahram suggested that the attacks on Charlie Hebdo’s office in Paris in January 2015 were a consequence of the cartoons and the failure to restrict the insults (Elliott et al., 2016). The attacks caused the death of 11 persons and injured 12 people (Pen International Organization, 2016). Some people blamed the Hebdo for the violence, as someone stated that the reaction was predictable, since Muslims were offended (Ali, ND). According to this opinion, criticizing religion can create hate speech (Elliott et al., 2016). Other opinions voiced by Muslims condemned the violent attacks (Ali, ND). On the other hand, some Western nations believe that Hebdo’s cartoon was a way of expressing opinions and therefore, was really
freedom of speech (Elliott et al., 2016). “Pen International Organization” (2016) assured their support for the freedom of expression even if it is offensive to others.

In the Arab world, incitement, accusations and slurs are practiced by biased media outlets and these affected many Arab countries negatively after the Arab Spring (Zahra, 2014). Similarly, hate speech was used in the Egyptian media after the 25th of January revolution (Elliott et al., 2016). One of the reasons for using it is the competition to win among political parties and their belief that winning can only be achieved through getting rid of ‘the other,’ which leads to creating clusters on the political and social levels (Zahra, 2014). The Egyptian media practiced clear incitement that increased conflict and led to the creation of violence and terrorism (Zahra, 2014). The types of hate speech forms included “political, xenophobic, religious and cultural forms” (Elliott et al., 2016).

Political hate speech was used against activists and members of the opposition during the ruling period of Mubarak, the SCAF, MB (El-Sherif, 2014), as well as during that of President Al-Sisi. It was, and still is, mainly directed against political groups and Egyptian oppositional figures due to their political views (Elliott et al., 2016). The growth of political hate speech in the Egyptian media was due to different factors including the chaotic way opinions were expressed after the 25th of January revolution and the unprofessional and the unethical standards adopted by the media (Elliott et al., 2016). Another factor was media politicization which resulted from the dependence of the media on private ownership (Elliott et al., 2016). During the last days of Morsi’s rule and after the June 30, 2013 protests, media polarization also increased (Elliott et al., 2016). At this stage, “conspiracy theories” and broad claims targeted different political groups and were disseminated through the media (Elliott et al., 2016).
Some of the MB leaders used hate speech but they did not clearly incite to violence, yet the way they used discriminatory hate speech was clear (El-Sherif, 2014). During a conference held at the Cairo stadium, and that was aired on TV when Morsi was the President, one of his Islamist supporters clearly called Morsi’s opponents as ‘infidels’ while Morsi remained silent (El-Sherif, 2014). This incident, according to El-Sherif (2014), was the trigger that encouraged extremists among his followers to disseminate hate and sectarian messages.

Similarly, hate speech was practiced after the isolation of Morsi according to the British Broadcasting Corporation (BBC). The media in Egypt reflected the huge division among Egyptians and supported hatred against Islamists (Zahra, 2014). Reuters asserted that this state of hate was supported by the failure of Morsi’s ruling period and the way MB was trying to take over authority (Zahra, 2014). As the government was later about to ban the Muslim Brotherhood, it portrayed them in the media as a terrorist group and footage was played as evidence to support this (Miles, 2013). In addition, there was a campaign on both state-owned and private TV full of negative messages targeting MB supporters through rejecting them from the society and portraying them as “evil, anti-Islamic and anti-national” (El-Issawi, 2014). Songs were played in the media glorifying the army (El-Issawi, 2014). One common song aired on TV titled “We Are a People; they Are Another,” implied that MB members and their supporters were “the Other” (Abdullah, 2014). Another video clip, produced by the Egyptian Ministry of the Interior and its song written by an army general, showed people shooting guns and saying “not from our country and not our children”\(^3\) and

\(^3\) Check “not from our country” song: https://www.youtube.com/watch?v=XFb21-P6XT4
“he who does not feel happy for our happiness and sorrow for our sourness is not one of us” which excludes MB members (El-Issawi, 2014) and all opposition in general.

Another type of political hate speech was practiced by a former prime minister on a satellite TV live program on January 28, 2016, as he expressed support for the mass killing of opposition groups. (Human Rights Watch [HRW], 2016). The program host, Ahmed Moussa, was discussing how the army made sacrifices and was fighting terrorism, and the minister was quoted by HRW (2016) as saying, “I swear that we will only be satisfied to have 400,000 for their sake… I swear by God Almighty that, personally, the fire in my heart will not be extinguished unless, for each one, there’s at least 10,000.” By this, he was indicating that he wished that, for every soldier killed, another 10,000 persons will die too. Moussa asked if the Minister meant all the MB members by this large figure and the latter firmly replied “I’m saying the Brotherhood and whoever helps them and whoever loves them and whoever pleases them and whoever takes bribes from them and whoever lives off their ill-gotten funds from Turkey and Qatar and Iran” (HRW, 2016).

Similar to political hate messages is nationalist hate speech that targets nationalists from Arab countries because of their views on Egyptian politics and who they are loyal to; this speech includes “conspiracy theories” describing people as “enemies of the nation” (Elliott et al., 2016).

The Egyptian media played a major role in creating a hostile environment against Palestinian and Syrian refugees living in Egypt (Zahra, 2014) as both groups were the target of threats and verbal attacks (Amnesty, 2013). The media helped in showing them as “thugs, beggars, greedy people” among other negative characteristics (Zahra, 2014).
Hate speech against Palestinians was mainly an accusation for their having a relationship with the Muslim Brotherhood (Elliott et al., 2016; Amnesty, 2013) and the Hamas movement (Elliott et al., 2016). Morsi was accused of having cooperated with Hamas to help him escape from jail during the January 25th revolution protests. Hamas was also accused by the media of shooting protesters on June 30 near the MB headquarters (Knell, 2013). Palestinians were further associated with the disturbance in North Sinai as “militant groups” in North Sinai were allegedly associated with Hamas (Amnesty, 2013). The speech was mainly targeting Palestinians after Morsi’s ousting (Zahra, 2014) and most refugees told Amnesty (2013) that their situation got worse after they were the target of hate speech.

Hate speech against Syrians increased in July and August 2013 then decreased again (Ayoub & Shaden, 2014). After the June 30, 2013 protests, a “few Syrians” joined pro-Morsi sit-ins. This was highlighted in the media and therefore caused a hostile attitude against them (Ayoub & Shaden, 2014). Syrians were accused of “carrying weapons, and of attacking civilians and security officials” (Amnesty, 2013). State and private TV spread the rumor that they were paid by the MB to shoot soldiers and anti-Morsi protesters (Sailer, 2013). Some TV anchors accused them of backing the MB and “interfering in Egypt’s internal politics” (Ayoub & Shaden, 2014; Amnesty 2013), while others threatened Syrians in case they interfered in Egyptian politics (Elliott et al., 2016). “If you interfere in Egyptian affairs, you will take 30 shoes [be beaten up] in the middle of the street,” said a well-known anchor (Amnesty, 2013) while another one stated in his program that Egyptians know where Syrians live and threatened to have their houses destroyed if they did not end their support to MB within two days (HRW, 2013; Amnesty, 2013). In addition, a former Egyptian parliament member asked to execute foreigners who participate in any protest in Egypt (Elliott et al., 2016). This increased the environment of mistrust and fear of Syrians (HRW, 2013).
Some Egyptians perceived Syrians as “enemies of the state” due to such statements in the media (Sailer, 2013). Some Syrians were physically attacked. In one such incident, a man was stabbed in the bus for only asking people to stop smoking and the stabber accused him of being a member of the MB (Mousa & Fahim, 2013). After June 30, 2013, Ayoub & Shaden (2014) conducted interviews with Syrians and organizations supporting them, and all confirmed that Syrians faced a hostile attitude. Some even said that they were dismissed from their work “while others had their rent contracts terminated” right after the June 30 protests (Ayoub & Shaden, 2014). Similarly, interviews with Amnesty (2013) confirmed that Syrians did not feel safe anymore. Also, after hate speech was used, some Syrian children experienced violence from their Egyptian counterparts (Ayoub & Shaden, 2014). These incidents contradicted the way Egyptians welcomed Syrians in 2011 and hosted them in their households until they found appropriate housing (Ayoub & Shaden, 2014). “Refugees told Amnesty International that they felt safe and protected” during this period (Amnesty, 2013). Changes in people’s attitudes towards Syrians show how the media can easily affect people’s behavior (Ayoub & Shaden, 2014). After the media attacks, many Palestinians and Syrians tried to smuggle their way out to Italy by sea (Amnesty, 2013).

Xenophobic hate speech also was used since the 25th of January revolution and part of the reason for practicing it was to claim that both the revolution and all democratic ideas are western-made (Elliott et al., 2016). For example, in TV program, an Egyptian actress said that all those in Tahrir square were from London, but they speak like Egyptians and their descriptive features, like skin color, are similar to those of Egyptians. She added that they were trained to take soldiers out of tanks and drive the tanks “because there is a war coming” (Bassiouney, 2012). Her words bring to mind the pre-colonization period. The actress was speaking in Arabic except when she said that a man was given a paper to write on it “no Mubarak.” She only said ‘no Mubarak’ in English to show that anyone working against
Mubarak or anyone with bad intentions was a foreigner or was working with foreign powers (Bassiouney, 2012).

After the ousting of Morsi, xenophobic speech continued. During the summer of 2013, negative responses against the US. and especially against Anne Patterson, the US ambassador to Egypt at the time, increased as Americans were blamed by many Egyptians for “trying to weaken” Egypt since some in Washington had criticized the ousting of Morsi (Daragahi, 2013). “Conspiracy theories” about foreign plans for weakening Egypt further started to spread in the media (Daragahi, 2013). An Egyptian TV commercial was xenophobic as it warned Egyptians about giving information to foreigners since these can possibly be spies (Elliott et al., 2016). Therefore, xenophobic hate speech can instigate hate or rejection of foreigners and more especially westerners (Elliott et al., 2016).

Polarization in the media leads to hate speech against religious groups too, especially Christians, and this has led to different attacks against them after the isolation of Morsi, with other religious minorities also being the target of hate speech (Elliott et al., 2016). There is further unfairness in Egypt on how religious hate speech is dealt with. Blasphemy against Islam, for example, leads to disorder that is “addressed” by the government while on the other hand, hate speech against other religions is rarely criticized (Elliott et al., 2016). In addition, the state media, especially the “Egyptian Radio and Television Union (ERTU)”, used hate speech while covering the protests on Mohamed Mahmoud Street and in Maspero (Zahra, 2014). In Maspero, the state TV paid no attention to the attack on protesters, who were mostly Egyptian Christians, outside its own building, nor to the running over and crushing most of them by army trucks (Abdulla, 2014). While it ignored these facts, the TV Channel claimed that protesters were attacking the army and throwing “rocks and Molotov cocktails on them, killing three and injuring 30 soldiers. The state TV clearly asked those
called “the good Samaritans of Egypt” to help the army against the protesters, but no one was punished in this incident (Abdulla, 2014). “This was not incitement to violence. The presenter was politically emotional. We admit this is a mistake.” The incident was investigated and “the presenter is back to work now”, said Ibrahim Sayyad, the then head of the News Department (as cited in El Issawi, 2014). On the other hand, four Christian teenagers were sentenced to prison for appearing in a video circulated on the Internet as they were laughing while reading Koranic verses and moving their hands over their friend’s neck imitating the so-called “Islamic group of Iraq and Sham (ISIS).” The teenagers said they were just mocking ISIS but they were judged for contempt of Islam (Raghavan, 2016).

Some private channels, like those affiliated with Islamist groups, used hate speech against Shia religious groups (Elliott et al., 2016; Africa Research Bulletin, 2013). After residents learned about the presence of the leading Shiite cleric “Hassan Shehata” as he was meeting with other Shiites in a house in the Abu Mussalam area, they surrounded the house requesting them to get out (Africa Research Bulletin, 2013). Upon their refusal, the house was attacked by “several hundred people” which led to the killing of four Shiites and injuring others, as police reported (Africa Research Bulletin, 2013). Bahaa Anwar, a Shiite activist said “… during the Syria solidarity conference attended by Morsi in the Cairo Stadium, Salafist sheikhs insulted Shiites and provoked hate against those Egyptian Shiite citizens” while Morsi did not condemn the offences nor the incitements (El Gundy, 2013). “An Egyptian court sentenced 23 people to 14 years in prison for the fatal lynching of four Shiite men…and acquitted eight other defendants” (HRW, 2013).

Another type of hate speech is directed against ethnic groups and members of certain communities such as the “Lesbian, Gay, Bisexual, and Transgender (LGBT) community” (Elliott et al., 2016). The LGBT community in Egypt was blamed for “many social ills, as
well as for the spread of diseases such as HIV” (Elliott et al., 2016). In one controversial incident, the police raided a bathhouse after a TV anchor told them that a few homosexual men were performing sexual activity in exchange for money (BBC, 2015). The program published footage of a group of men wearing only their sauna towels while being pushed into police trucks (Trew, 2015). The court acquitted the men of the “debauchery” accusation (BBC, 2015). However, many of them lost their occupations and one of them, according to his lawyer, set himself on fire as a result of the humiliation he was exposed to and his being labeled as gay, which is unacceptable in the Egyptian society. (Trew, 2015). The TV host later said that the aim of the program was to raise awareness of HIV/AIDS (Trew, 2015; BBC 2015); despite the fact that almost half of all detected HIV cases in Egypt occur through heterosexual transmission” (Trew, 2015). The host and the program director were charged with defamation (Trew, 2015). “Pro-government news outlets are often invited by security forces to cover this kind of raid” and reporters usually interview suspects on the spot and reveal their identity which damages their reputation and even their lives (Trew, 2015). This is particularly true because the LGBT community is rejected by most people (Elliott et al., 2016), especially in a conservative country like Egypt.

Research conducted by “MENA Media Monitoring” (2015) investigated hate speech in the press of different countries in the Arab region. In Egypt, the research focused on a period of three weeks from June 5 to 26, 2014 and examined Al-Dustour, Al-Watan and Al-Masry Al-Youm private daily newspapers in addition to the state-owned daily newspapers, Al-Gomhouria and Rose-Al-Youssef. They further examined the weekly private newspapers, Al-Isboa, Sawt-Aloma and Alfagr.

Hate speech found in Al-Dustour newspaper constituted 41% of the content, Al-Watan 19%, Al-Masry Al-Youm 27%, Al-Gomhouria 3% and Rose-Al-Youssef 10%. The
total of hate speech was 415 acts divided as follows: 144 incitements but with no mention of the type of incitement used, five discriminations, two incitements to violence, 16 incitements to killing, 139 slurs and 109 stigmatizations.

Hate speech sources were mainly opinion article writers and journalists. The majority of hate speech, more than 55% of it, was practiced by opinion article writers, followed by around 16% found in stories written by known and unknown journalists. People presented as religious scholars and as Salafists were also the most outstanding performers of hate speech.

On the other hand, more than 51% of hate speech targeted MB members, while seven per cent of it targeted civil society and its activists and 17% of it targeted western countries especially the US.

More than 90% of the hate speech used was found in stories and articles with political themes.

For the weekly newspapers, hate speech constituted 52.40% of the content of Al-Isbo, 33.90% of Sawt-Aloma and 10.07% of the content of Alfagr. The total of hate speech acts was 81 times divided as follows: 35 incitements but with no mention of the type of incitement used, one discrimination, 20 slurs and 25 stigmatizations, while no hate speech related to incitement to violence or killing was found.

The majority of hate speech, about 87.27% of it, was found in opinion pieces such as editorials, analyses, opinion articles, columns and comments, followed by 8.45% in news stories and reports, then 2.74% in headlines, followed by 0.81% in interviews, and finally 0.54% in caricatures and images. Similar to daily newspapers, opinion articles were the major venue for hate speech which constituted 88% of their content, followed by stories written by known and unknown journalists and where hate speech constituted 11% of the content.
While ten per cent of hate speech targeted former political systems and presidents, the Muslim Brotherhood members were the most targeted by hate speech. Further stories about politics constituted 96.42% of hate speech and 1.79% was about the media.

The study is important as it shows the presence of hate speech in different newspapers and indicates, as well, the sources and targets of hate speech. However, its time span is short so further studies should be conducted on a larger time span to increase sampling accuracy and to be more representative of each media outlet.

Another study by Al Sawt Al Hurr, the Arab Network for Media Support, examined the CBC, Nile News, Al-Hayah and Al-Jazeera Mubashr satellite TV channels in the time span of 15 days, starting from the 10th to the 25th of September 2013 and aiming to measure the ethical standards and professionalism of different segments of the programs aired in these channels. The study focused on prime time which they operationalized between 7:00 pm until midnight. The research found that all the channels under investigation used hate speech in different degrees, and this negative speech sometimes came from the guests and not from the anchors as in Al-Hayat Al-Youm talk show (Zahra, 2014).

The study examined 43 segments from Nile News divided among talk shows, interviews and news reports. Generally, in 86.5% of the analyzed content, anchors did not use slurs. However, in four segments, some guests used “inappropriate language” for 9.30% of the content and mainly targeting MB members while guests in two segments mocked them. Besides, 25.58% of hate speech in 11 segments was mostly directed towards MB members and 13.95% in another six segments included “to a certain extent” discriminatory hate speech (Zahra, 2014; Al Sawt Al Hurr, 2014). However, the study did not mention what it meant by ‘discriminatory’ and did not clarify the study’s usage of the word “to a certain extent.” But, it provided examples such as the calling of MB members and the “Hamas Palestinian
movement” as ‘terrorists’ and assuring the viewers that the MB helped Hamas to build tunnels to facilitate the entry of terrorists in Sinai, Egypt, without supporting the accusation with information or facts (Zahra, 2014; Al Sawt Al Hurr, 2014). The study also found other accusations of corruption with no adequate information to support them (Al Sawt Al Hurr, 2014).

Al Sawt Al Hurr (2014) study examined 46 segments of Aljazeera Mubasher Misr including interviews, talk shows and news reports. In 35 segments, 76.09% of the content did not include slurs as the sources interviewed held the same views as the anchor and thus no arguments were included, while other programs included some general accusations and slurs between guests. The channel used incitement speech for at least 10 times, mostly by guests who are pro or against Morsi’s ousting (Zahra, 2014; Al Sawt Al Hurr, 2014).

Al Sawt Al Hurr (2014) examined 33 episodes of different talk shows on CBC channel and found that 66.67% of them were free of hate speech (Zahra, 2014; Al Sawt Al Hurr, 2014) while nine segments included 27.27% of “inappropriate language” mostly used by the anchors against MB members with the anchor mocking them in one or two segments (Al Sawt Al Hurr, 2014). Seven of the analyzed segments included 21.21% cases of incitement, but the study did not clarify the kind of incitement made, and four segments included 12.12% cases of hate speech and isolation “to some extent” (Al Sawt Al Hurr, 2014). The study did not clarify the meaning of “to some extent” but provided examples, such as the case when one anchor commented on a news item regarding the MB meeting in Istanbul and Pakistan by saying that “MB members are meeting to find destroyable ways.”

The study also investigated Al-Hayah Al-Youm talk show on Al-Hayat TV, which included 47 different segments. It found indirect speech that included negative connotations targeting MB members as well as six cases of mocking them and the ousted President’s
ruling period (Zahra, 2014; Al Sawt Al Hurr, 2014). The study did not find hate speech but mentioned that sometimes guests attacked MB members, Hamas, Turkey and its ambassador in Egypt (Zahra, 2014; Al Sawt Al Hurr, 2014).

This research based its analysis on a short time span, which makes the results not generalizable. Besides, operational definitions and the bases of the analysis are not clear and this might cause ambiguity between personal opinions and hate speech and can make the analysis subjective.

Both Morsi and President Al-Sisi’s ruling periods witnessed hate speech to win people’s hearts and minds while the media either participated in a compulsory or in an optional way (Zahra, 2014). At this point, hate speech inflamed violence to the extent of killing others which means it succeeded in arousing people’s feelings of anger since people started to express their opinions violently (Zahra, 2014).

### III.7 Effects of Hate Speech

It is argued that there are different possible effects of hate speech on victims. However, the harm caused differs from one person to another and depends on the setting (Delgado & Stefancic, 2009). People exposed to hate messages can experience it in the form of ‘ill-treatment by others’ (Leets, 2002). This can produce different effects including short-term effects such as “embarrassment, humiliation, mortification, intimidation, isolation, frustration, anger, fear, helplessness, shame, hurt, anguish, and anxiety” (Leets & Giles, 1997).

In their study, Dawns and Cowan (2012) mentioned that hate speech “has been a strong weapon in the past that could harm individuals by degrading, terrorizing, wounding and humiliating them” (Sevasti, 2014). Dehumanizing statements also create discriminatory
attitudes towards others (Roginsky, & Tsesis, 2016). In addition, if hate speech victims experience daily speech that conveys the message they are not valued and belittles their dignity, they start to disbelieve in their own self-respect and hate themselves due to the cumulative effect of hate messages (Ring, 2013). Consequently, one of the possible harms of hate speech is hurting and/or weakening people’s dignity which also causes distress and psychological or emotional pain (Leets, 2002).

Leets and Giles (1997) explain that the long-term effects of hate speech involve “debilitating depression, sleeplessness, nightmares, withdrawal, loss of confidence, loss of self-esteem, psychosis, hypertension, and post-traumatic stress disorder.” Leets (2002) explains the effects of such trauma and how hate speech victims cope with it through the “Three-phase Crises Reaction Model” produced by Bard and Sangrey (1986). This model was applied in a couple of traumatic situations to victims of crime and violence (Leets, 2002).

The model design divides the traumatic events into three phases, investigates responses over time and summarizes the similarity of responses. The effects of traumatic events consist of “feelings (affect), thoughts (cognition) and actions (behavior)” (Leets, 2002). These effects can be noticed through the three expected order of “impact-disorganization, recoil, and reorganization” (Leets, 2002).

The “impact-disorganization” phase takes place right after the traumatic event occurs. At this point, the person shows emotional responses which might include “anger, disbelief, and a feeling of violation or vulnerability.” This period could last from hours to days (Leets, 2002).

The second phase, “recoil,” witnesses the emergence of short-term emotional responses, where the person experiences “emotional swings” such as “fear to anger” or
opposing responses such as blaming the self to blaming others (Leets, 2002). Other communal effects in this phase are “loss of identity, self-respect, and trust” (Leets, 2002).

The third phase, “reorganization,” is the long-term stage where individuals try to cope and changes in their behavior occur. They start embracing a “defensive-vigilant” attitude and they appraise morals and behaviors to re-accommodate themselves with their daily life (Leets, 2002).

Alexander Tsesis, legal scholar, says that the usage of language and vocabulary plays a major role psychologically in creating racist behavior (Ring, 2013). Ethnic and racial insults, for example, would cause “ethnic violence, which ranges from hate crimes targeting individuals to mass genocide” (Ring, 2013). In addition, slurs targeting race are the most used in discriminatory attitudes, which harms the victim’s dignity and confidence and also causes mental and emotional distress, the most apparent effects of discriminatory insults (Delgado, 1982). These messages do not only affect the victim, but are even transmitted to upcoming generations (Delgado, 1982). Further, Delgado asserts that insults based on people’s characteristics such as ethnicity, gender, or race are one of the factors that deeply affect hate speech victims, more so than stereotyping, because these characteristics cannot be changed. Therefore, these victims are oversensitive and they anticipate pain when they communicate with others. Besides, their social relationships are affected as they have contact with people from other races less often (Delgado, 1982).

Hate speech also creates stereotypes and therefore prejudice is automatically recognized and acknowledged by people (Roginsky & Tsesis, 2016). The demeaning generalization directed at minorities turns to definitions and clichés known by the society about the entire group (Roginsky & Tsesis, 2016). Stereotypes cause instant emotional and mental distress and the ability to reinforce earlier stigmas can cause long-term psychological
harm (Holschuh, 2014). Moreover, groups targeted by hate speech might believe allegations made against them (Ring, 2013).

The effects of hate speech on its victims can also be physical, in addition to the mental and emotional harm, particularly if the victim experienced this speech in the presence of others or by a person in an authoritarian position (Holschuh, 2014 & Delgado, 1982). “Physical symptoms include fear in the gut, rapid pulse rate and difficulty in breathing, nightmares, post-traumatic stress disorder, hypertension, psychosis, and suicide” (Holschuh, 2014). Insults might even cause high blood pressure (Delgado, 1982).

Leets (2002) adds that it is argued by scholars that “words and pornographic pictures” might deeply and permanently hurt people since experiencing emotional and psychological pain can be worse and harder to tolerate than physical loss or pain, as reported by some people (Leets, 2002). Graumann (1998) states that “aggression itself is largely performed or enacted in words…. and everyday conflicts between competing and rivaling individuals … are, at least in their early stages, carried out verbally” (as cited in Leets, 2002).

Hate speech does not only affect individuals but also the whole society. For individuals, it can cause “pain, distress, fear, embarrassment and isolation” among other effects (Sevasti, 2014) while for groups, hate speech can cause inequality problems and drive group members to isolation (Sevasti, 2014). Also, victims may isolate themselves and withdraw from other victims in the same group (Holschuh, 2014). Hate speech terrifies and discourages group members from expressing their points of view and from integrating in their community especially when hate and prejudice messages are allowed in public space (Sevasti, 2014). Such effects can mute “the victims and therefore reinforce existing hierarchies in the society” (Sevasti, 2014) especially in women and minorities (Ring, 2013).
In addition, during critical events, hate messages might cause obscurity of “sociopolitical” actors and might lead to general confusion for citizens, which might detach them from political engagement (Sevasti, 2014). Hate speech can also cause its victims to become more threatening and aggressive (Sevasti, 2014).

Racist speech also might affect the country economically, as minority groups’ job opportunities as well as their personal social development are affected. This may enforce their perceptions of themselves and of being viewed as out-group members (Delgado, 1982).

Discrimination further elevates the characteristics of ‘in-groups’ while it diminishes ‘out-groups’ dignity (Roginsky, & Tsesis, 2016). It further divides people into clusters and creates boundaries whereas in-groups depict themselves in a positive way while out-groups become seen and depicted as threatening to the society and the culture (Roginsky, & Tsesis, 2016). Discrimination might also lead to violence against groups (Ezzat, El-Banna & Aboud, ND).

There is also a psychosocial model that might be applied for the in-groups and out-groups. This is the “moral inclusion and exclusion” model where morally-excluded people are viewed in a negative way. This model belittles them and their importance and therefore it suggests that harming morally-excluded people is fair and appropriate (Leets, 2001). Conversely, morally-included are people who are previewed as deserving good treatment and justice and if they endured any harm, people would sympathize with them (Leets, 2001).

Victims of hate messages might respond by using drugs, alcohol, or by committing other types of anti-social behavior to escape the harmful negative effects they are suffering (Delgado, 1982).
III.8 Hate Speech Leads to Genocide (Rwanda’s Case)

Rwanda, the smallest country in Africa, is only 26,340 square kilometers; its history prior to colonization is not well-known; however, historians believe that it was inhibited by “Twa” pygmies people and then, around 10,000AD, the “Hutus,” mostly farmers, arrived and dominated the population (Magnarella, 2005). Later, between the 11th and 15th century, the “Tutsis” fighters, who were used to protecting “their herds against raiders and raiding for cattle and village goods themselves,” arrived to Rwanda. (Magnarella, 2005). The Tutsis’ characteristics allowed them to occupy most of Rwanda and start their own rule despite the fact that the Hutus outnumbered them. The Tutsis ruled by force and dominated the Hutus and the Twa economically, militarily and politically (Magnarella, 2005). Twa’s ethnicity in the historical content and during the genocide is generally forgotten and unknown, and even the government did not acknowledge them after the genocide (Thomson, 2009).

The Tutsis were superior over their counterparts (Allen & Norris, 2010) and males received special treatment and warrior education while the Hutus and Twas did not receive any education and only assisted, carried supplies and fought. The Tutsis were taught to be superior and “their status, military training and ideology set them apart from non-Tutsi” (Magnarella, 2005).

Many Tutsis seized Hutus’ land and owned “large herds of cattle and extensive tracts of land.” With the population growth, many Hutus suffered from poverty and famine, specially that most did not own land and others owned only few plots of land. The Hutus had to work for the Tutsis to survive and have access to land (Magnarella, 2005). However, the Tutsis and the Hutus lived in harmony before Rwanda’s colonization (Thomson, 2009).

Germany ruled Rwanda indirectly through the Tutsis from 1894 until the end of World War I and in 1924, Belgium became its administering authority until Rwanda’s independence in 1962 (Magnarella, 2005). During the German and Belgian colonization, the
Tutsis were favored over the Hutus. The Belgians also gave Tutsis power unlike the Hutus (Allen & Norris, 2010) who were forced to work in agricultural and infrastructural projects constructed for Belgians’ profit and those who failed to meet expectations were violently beaten by Tutsi chiefs, which caused hatred between them (Magnarella, 2005). The Belgians discriminated between the two groups further by issuing “ethnic identity cards” (Allen & Norris, 2010), which were a tool used during the genocide that allowed the Hutus to identify the Tutsis and kill them (Caplan, 2007).

The Belgium discriminatory rule against the Hutus ended during the late 1950s (Allen & Norris, 2010). Pro-Hutu and pro-Tutsi parties were formed, then, in 1959, pro-Hutus revolted and this resulted in ethnic clashes that toppled the king (Magnarella, 2005). This helped them to gain power with the independence in 1962 (Alozie, 2007). In 1960, the Belgians started to replace Tutsis with Hutu chiefs who took control and started to oppress Tutsis and portray them as invaders; then, in 1963, many clashes erupted which led to the death of thousands of Tutsis and 130,000 Tutsis fled to neighboring countries (Magnarella, 2005; Allen & Norris, 2010).

The Rwandan Patriotic Front (RPF) was formed by Tutsi refugees aiming to form a new government and topple President Habyarimana (Allen & Norris, 2010). Under his rule, the Tutsis had better status and there was little ethnic violence, but discrimination against them remained and the refugees were not allowed back to Rwanda; as Habyarimana said that there was poverty and little resources for them (Caplan, 2007). In the 1990’s, the RPF attacked Rwanda and clashes erupted between the Tutsis and the Hutus, supported by racist media (Allen & Norris, 2010) and which continued over the years. This affected the economy and paved the way for the genocide of 1994 (Alozie, 2007; Caplan, 2007) led by Rwandan officials against the Tutsi minority (Straus, 2007). All Tutsis were portrayed as RPF
supporters (Caplan, 2007).

On the 6th of April, 1994, Rwanda’s President Habyarimana and Burundi President Ntaryamira were returning from a peace assignment (Alozie, 2007). The plane was shot down and crashed (Allen & Norris, 2010). Some believe that the RPF shot the plane while Caplan (2007) says there was no investigation so no one can be certain who the attackers were.

The preceding incidents including discrimination, famine, poverty and clashes that occurred before the genocide prepared for the massacre of 1994 with the help of the media. The local media encouraged the killing and the international media “ignored or misunderstood what was happening” (Dallaire, 2007). “Hate radio” specifically had a bigger role than the print media as it is considered a mass medium, unlike the print media which had a limited circulation and was only used by the elite and the people living in cities (Straus, 2007). The Radio gained more prominence also because most of the population in Rwanda could not read or write; therefore, the government used the local Radio to transmit its messages and used it as a propaganda tool (Des Forges, 2007).

During the peak of the massacre, people were found holding portable radios (Dallaire, 2007), as batteries and portable radios are cheap in Rwanda (Straus, 2007). The image of murderers holding the “machete” in one hand and the radio in the other is unforgettable (Dallaire, 2007).

Radio Rwanda, created in 1961 and owned by the government (Kamilindi, 2007), started to incite for murder even before the genocide. In 1992, it claimed that a human rights group had warned the Hutus that the Tutsis would attack them in “Bugesera, south of the national capital” (Des Forges, 2007). Officials used the radio to encourage the Hutus to defend themselves by attacking first, and consequently hundreds of Tutsis were killed (Des Forges, 2007).
“The extremist local media, Radio-Télévision Libre des Milles Collines (RTLM),” played a greater role than other radios as it was considered a reliable source on issues related to politics and offered entertainment and breaking news (Li, 2007). However, it used the strong medium to stimulate hate and negatively stereotype Tutsis (MacKinnon, 2004).

The RTML was created in 1993 by the Hutus devoted to the ideas of the people in authority (Straus, 2007) in order to publicize the Hutus’ elite ethno-political war against Tutsis’ RPF (Kimani, 2007). Similar to Radio Rwanda, it demonized the Tutsis and encouraged killing them. The RTML ran a campaign before the genocide indicating that Tutsis should not live in Rwanda and explaining how to exclude them (Dallaire, 2007). The radio referred to the Tutsis as dogs, cockroaches and cannibals and encouraged eliminating them from the society with no mercy (Chrétien, 2007). It further cheered each time a Tutsi family was killed and called those who did not kill them ‘cowards’ (Kamilindi, 2007). Broadcasters sometimes even named people and places in particular which were later attacked (Straus, 2007). The Hate campaign was mainly carried out by journalists and broadcasters more than by guests or the government (Kimani, 2007). However, authorities used the radio to encourage killing and to instruct people on how to do it (Des Forges, 2007).

No one succeeded in fighting hate speech in the Rwandan media as it was extremely powerful and closely tied to people in power including “military, government and business” people (Kamilindi, 2007).

The radio also took advantage of the historic events between the Tutsis and the Hutus to disseminate hate and the fear of repeating the history of Tutsi dominance (Kimani, 2007). It used the fear factor of an “armed attack” by the Tutsis to stimulate Hutus’ hate and violence against Tutsis and the Hutus supporting them (MacKinnon, 2004). The radio called people to attack the Tutsis and kill them mercilessly and explained how (MacKinnon, 2004).
In short, the RTML established ideas in the minds of the audience and made them hate, fear and dehumanize the Tutsis. It further paved the way for the genocide and legitimized aggression (Straus, 2007).

Despite the 30 percent literacy rate in Rwanda (MacKinnon, 2004), the print media also played a role in spurring the killing. For example, the bimonthly and most influential newspaper in the 1990s, “Kangura” (Kabanda, 2007), which is allied with Hutu power, (Kimani, 2007), was famous for its hatred of the Tutsis and the Hutus who wanted freedom and democracy (Kabanda, 2007). The newspaper was known for its “Ten Commandments of the Bahutu” which implied that the Tutsis are the utmost enemy and the Hutus should break any relations with them, like business, marriage or professional ties. The paper described the Tutsis as “hypocrites, thieves, killers, marked by malice and dishonesty;” while it represented the Hutus as “generous and naïve.” The Tutsis were represented as “devious and aggressive” (MacKinnon, 2004). The newspaper further implied that Tutsi women are spies, should not be trusted and only seduce Hutu men to increase Tutsis’ ethnicity (MacKinnon, 2004). Kangura further encouraged the isolation of the Tutsis and their exclusion from any historical, cultural or political community and called for an authentic and pure Rwanda (Kabanda, 2007). However, the paper pointed that the Tutsis could join the community classified as nonnatives and should be closely observed as they aim to dominate and secretly lead to counter revolution (Kabanda, 2007). The newspaper also accused the Tutsis of abusing the country’s privileges which resulted in the country’s poverty, difficulty in accessing education, jobs, health care and scarcity in resources and less fertile lands (Kabanda, 2007).

The genocide ended on July 18, 1994 (Caplan, 2007) after approximately 800,000 persons were killed, most of whom were Tutsis and a few moderate Hutus (Allen & Norris, 2010). Three million were evacuated (Alozie, 2007). The country was ruined with the
number of people who were killed, had become refugees and were exiled; many people suffered, were tortured, humiliated and injured while women were also raped and infected with AIDS. Ninety per cent of the children also suffered by witnessing the massacre (Caplan, 2007). Despite all the suffering, months after the genocide, the radio continued to normalize and legitimize the massacre, showing the Tutsi as the other ethnicity that deserves to be killed (Chrétien, 2007).

III.9 Hate Media Leads to Civil War (Bosnia’s Case)

People’s republic of Yugoslavia was formed in 1946 by Josip Broz Tito with the Soviet Union support and it consisted of six republics, each with different ethnic group (Taylor & Kent, 2000). These republics were Slovenia, Croatia, Serbia, Montenegro, Macedonia and Bosnia-Herzegovina (Shrader, 2003). Under Tito’s authoritarian rule politics based on ethnicity was discouraged and there was high percentage of intermarriage (Markusen & Mennecke, 2004).

The Yugoslavian Union started to collapse after Tito’s death in 1980 (Covington, 2015). Within this period economical problems started to appear, unemployment rates increased and high standard lifestyle people were used to was not common anymore (Markusen & Mennecke, 2004), the nation started to fail (Taylor & Kent, 2000).

Bosnia, Slovenia and Croatia declared their independence but many violent incidents and war erupted in between.

A result of the “instability and insecurity emerged ruthless nationalistic leaders.” “Slobodan Milosevic” took over power in Serbia and conducted different violations targeting Bosnian Muslims (Markusen & Mennecke, 2004). “Franjo Tudjman” ruled Croatia and used new laws to discriminate against Serbs who constitutes 12% of the Croatian population
When ethnic leaders started to take control of different regions the media was used as a tool to increase ethnic conflicts (Taylor & Kent, 2000).

Both leaders controlled the public media, especially television and radio, and used it as a propaganda tool (Markusen & Mennecke, 2004) to mobilize people (Taylor & Kent, 2000). Both of the leaders also showed through the media that people from their ethnicity are heroes and portrayed them as “in-group” people, while others are villains and are portrayed as “out-group” people (Taylor & Kent, 2000).

To manipulate the public opinion in Serbia, Milosevic used the media to revive in the public minds old memories of World War II and how the Croatians government was associated with Hitler, “known as the Ustasha,” “killed hundreds of thousands of Serbs, as well as Jews and Gypsies” (Markusen & Mennecke, 2004). Different violent incidents were also documented and aired on TV to revive people’s memory with the war (Markusen & Mennecke, 2004).

In the meantime, in Croatia, Tudjman’s government was restoring “Ustasha’s” regime. For example, by naming streets “after Ustasha leaders.” After such incidents Milosevic propaganda was reinforced among Serbians in Croatia and in Bosnia too (Markusen & Mennecke, 2004).

The leaders also oppressed independent media and marginalized political parties and individuals who believed in co-existence between the different ethnic groups (Markusen & Mennecke, 2004). The media further intensified “fears and tensions between Serbs and Croats and demonized Muslims” (Markusen & Mennecke, 2004).

Slovenia and Croatia announced their independence from Yugoslavia in 1991 (Covington, 2015; Markusen & Mennecke, 2004). However, Yugoslavian Federal army
attacked Slovenia for 10 days to prevent its withdrawal from Yugoslavia, but the “European Community brokered a ceasefire” and guaranteed the independence of Slovenia. Also, “The Yugoslavians agreed to withdraw all troops and equipment from the region in three months” (Covington, 2015).

Similarly, Croatia did not gain its independence easily, as Serbs backed with Yugoslavian forces, started to attack Croatia and took over around “third of the country” (Covington, 2015). As a response Croatia cut it ties with Yugoslavia and the violent war begun. Later the U.N. Security Council prevented any export of weapons to former Yugoslavia to end the violence, and later in the same year Croatia gained its full independence (Covington, 2015). However, UN peacekeepers were present to ensure imposing the peace agreement, this decreased the violence but the fight did not end and occasionally erupted until 1995 when Serbs were expelled from the country (Covington, 2015).

The war that occurred in Croatia in 1991 started the pattern of ethnic cleansing and therefore it contributed to the Bosnian war that started in in 1992 and lasted until 1995 (Taylor & Kent, 2000). The 1991 war in Croatia was also triggered due to the failure to of anti-governmental and anti Milosevic demonstrations due to police violence and it resulted in ethnic war between Serbs, Croats and Muslims (Ramet, 2002). Serbians also took control of 30 percent of Croatia. Serbian’s and Croatian’s forces signed an agreement to stop fighting but one year later in 1992 and during the demonstrations anniversary around 30,000 Serbians protested to demand Milosevic’s to step-down among other demands, but again they did not succeed (Ramet, 2002).

As Bosnian leaders wanted to extend the region, the Bosnian civil war started (Taylor & Kent, 2000). Bosnia-Herzegovina announced its independence in 1992 (Markusen &
Mennecke, 2004). But Bosnian Serbs started fighting, while “Serbia and Montenegro”
created the New Federal of Yugoslavia and gained little international recognition, unlike the
countries that announced their independence before (Covington, 2015).

The civil war was mainly between Bosnians (Muslims), Bosnians Serbs (Orthodox
Christians) and Bosnian Croats (Catholics) (Taylor & Kent, 2000). During this time the
media created unity within the same ethnic group but through stereotyping and demonizing
groups from different ethnicity (Taylor & Kent, 2000). Through nationalistic media, the
leaders disseminated hatred among different ethnic groups which lead to 1992-1995 civil war
(Taylor & Kent, 2000).

Tudjman also declared that Croatia will expand into Bosnia-Herzegovina and stated
to the press that if Bosnia declared its independence this will harm the survival of Croatians,
and the republic’s strategic interests (Ramet, 2002). During the Bosnian war all the leaders
used the media to incite and mobilize each ethnic group towards the war and the media
reinforced “cultural stereotypes and demonized other ethnic groups.” The messages affected
the target audience as well as it frightened each minority group living in different regions
(Taylor & Kent, 2000). When the propaganda started ethnic minorities had to flee and those
who did not, were forced to leave or were killed (Taylor & Kent, 2000).

Besides fighting the government, Serbs with the Yugoslavian support started ethnic
cleansing to create a state of “pure Bosnians” (Covington, 2015). Bosnian Serbs further
forced Bosnian Muslims to flee to Srebrenica (Mulaj, 2017). Bosnian Serbs also created
“detention camps” which was usually overloaded and detainees witnessed different violations
including murdering, torturing, beating, and sexually assaulting women and men. Like
Bosnian Serbs also Muslims and Croatians forces murdered and tortured other Serbs in
camps (Markusen & Mennecke, 2004).
On May, Both the Yugoslavian and Bosnian governments reached a peace agreement. “Yugoslavia withdrew their forces from Bosnia, but left their heavy weapons in the hands of the Bosnian Serbs,” therefore, violence increased all-over the country (Covington, 2015).

In 1992 the U.N. security council founded a “war crimes commissions” to examine the reports about “mass rape, torture, starvation, and executions committed by all sides, particularly the Bosnian Serbs.” There were also different trials to resolve the war, but they failed and Bosnian Serbs continued attacking U.N. safe areas. Also Bosnian Serbs and Croats refused to create passage to deliver aid to Bosnian Muslims (Covington, 2015).

There was hope for ending the war by mid-December 1994, when Radovan Karadzic the Bosnian Serb leader “invited former President Carter to visit Bosnia” hoping to reach peace agreement. However, in 1995 Bosnian Serbs attacked Srebrenica which was announced as a safe area by the U.N. in 1993, they further arrested Dutch peacekeepers. Bosnian Serbs also killed around 7,000 Bosnian Muslims civilians in one week (Mulaj, 2017) and left them in mass graves. While most of those killed were boys and men, the attackers continued to threaten and rape women and girls (Covington, 2015). Later after this massacre occurred the “North Atlantic Treaty Organization” (NATO) started to attack “Serbs military targets” by air strikes, also Milosevic who supported Bosnian Serbs started to negotiate peace agreements because he wanted to lift “the heavy economic and cultural embargo that had been placed on Yugoslavia” for supporting the Bosnian war. Finally, in November 1995 the war ended with the peace talks between different countries including the “United States, the United Kingdom, France, Germany, and Russia” (Markusen & Mennecke, 2004).
This war is considered the worst in Europe after the holocaust and it claimed around 100,000 people’s lives (Covington, 2015; Mulaj, 2017) and injured many. Besides, more than two million were exiled (Mulaj, 2017).
Chapter IV

THEORETICAL FRAMEWORK

IV.1 Framing Theory

Some artists carefully choose how they frame their artistic creations as they understand the prominence and importance of the frame for their painting and how it affects the audience’s perspective towards the painting (Tewksbury & Scheufele, 2009). Similarly, in framing in the field of communication, journalists choose how to describe the political world through their choice of words and images that have the power to affect the way the audience understands the communicated message (Tewksbury & Scheufele, 2009). Framing events and issues in a certain way is one of the most effective ways the media use to influence public opinion. This framing contains a “communication source presenting and defining an issue” (De Vreese, 2005). This research uses the framing theory since hate speech is a form of framing and because hate speech consists of a source presenting a certain topic through a medium. The communicator chooses certain words to frame hate messages and chooses what to highlight and what to obscure, which makes this theory relevant to the topic.

The ‘framing theory’ was first introduced by Erving Goffman and aims to show how powerful the communicated text message is (Entman, 1993). It includes the ways of selecting and highlighting some issues and therefore their salience (Entman, 1993), while obscuring other information (Lecheler, Keer, Schuck, & Hänggli, 2015). “To frame is to select some aspects of a perceived reality and make them more salient in a text in order to be communicated in such a way as to promote a particular problem definition, a causal interpretation, a moral evaluation, and/or a treatment recommendation for the item described” (Entman, 1993). This offers a way of understanding the issue (De Vreese, 2005). The framing theory implies that there are steps where an individual develops a way of understanding and
thinking about a certain issue (Chong & Druckman, 2007). The theory further suggests that
the same topic can be perceived through different ways and can be interpreted differently
(Chong & Druckman, 2007).

While there is a divergence of political contexts and message spheres (Lee, McLeod
& Shah, 2008), news framing can be analyzed and recognized through “the presence or
absence of certain keywords, stock phrases, stereotyped images, sources of information and
sentences that provide thematically-reinforcing clusters of facts or judgments” (De Vreese,
2005). As framing affects the audience, journalists are affected too; studies found that when
some newspapers frame an event in a certain way, other newspapers follow the same framing
and this is coined by Fishman as “news wave” (Scheufele, 1999).

Tankard (2001) suggests 11 framing methods to distinguish and measure news
frames. These are: “headlines, subheads, photos, photo captions, leads, source selection,
quotes selection, pull quotes, logos, statistics and charts, and concluding statements and
paragraphs” (De Vreese, 2005).

Four features in the communication process are also suggested. These are “the
communicator, the text, the receiver, and the culture” (Entman, 1993). The communicator
builds the framing through choosing what to say directed by frames according to the
communicator’s beliefs, either intentionally or unintentionally while the text includes frames
that are directed by the existence or lack of “certain key-words, stock phrases, stereotyped
images, sources of information, and sentences that provide thematically-reinforcing clusters
of facts or judgments” (Entman, 1993). The frame guides the receivers’ beliefs, but it is not
necessary that a framing effect or the original intention of the communicator take place
(Entman, 1993). It is also not necessary that the audience approve the frame presented to
them, but the frame still acts like guidelines that indirectly outline how the audience will
understand and interpret the message (Batziou, 2011). Finally, the culture, which is mainly
“the stock of commonly invoked frames, might be defined as the empirically demonstrable set of common frames exhibited in the discourse and the thinking of most people in a social grouping” (Entman, 1993).

There are different aspects that affect audience interpretation of the frame. The “frame in thought,” for example, is a “set of dimensions” that affects the person’s appraisal of a certain subject (Chong & Druckman, 2007). For instance, if a person is asked about the right of hate group to demonstrate in a way that stresses the prominence of free speech then ‘the frame in thought’ that the person will embrace is free speech (Chong & Druckman, 2007). On the other hand, if prominence is given to “free speech, public safety, and the effect of the rally on the community’s reputation” then the individual ‘frame in thought’ will constitute a mixture of thoughts (Chong & Druckman, 2007). In short, ‘the frame in thought’ is the major aspect that affects the final opinion (Chong & Druckman, 2007). This is why politicians try to highlight specific characteristics of their policy to encourage people into thinking in a certain way (Chong & Druckman, 2007).

The repetition of a news frame also affects people exposed to it. Nowadays, media outlets are present, both online and offline, and therefore, the likelihood of increasing exposure to the same frames is increased, which is called the “echo chamber effect” (Lecheler, Keer, Schuck, & Hänggli, 2015). The repetition of the same news frame is also increased due to the growth of the professional political public relations which leads journalists to depend on a limited scope of similar sources when they write news stories (Lecheler, Keer, Schuck, & Hänggli, 2015).

It is argued that the likelihood of repeating news or one-sided framing is when it is “scandalous, contentious, or value-laden” (Lecheler, Keer, Schuck, & Hänggli, 2015). Mitchell (2014) suggests that political scandals are the most likely to receive repetitive coverage by the media where “one (negative) aspect of a political actor is highlighted
repeatedly over a period of time” (Lecheler, Keer, Schuck, & Hänggli, 2015). Also, after scandalous information is leaked, the media and political professionals spread similar messages to suppress other oppositional sides from different media outlets (Lecheler, Keer, Schuck, & Hänggli, 2015). The audience is also affected, because when people are exposed to the same negative or positive frame repeatedly, they search for the same frame again, and will mostly ignore other competitive opposing frames (Lecheler, Keer, Schuck, & Hänggli, 2015).

Lecheler, Keer, Schuck, & Hänggli (2015) conducted a study to evaluate “both the strength and the duration of effects of repetitive framing over time.” They exposed the participants in the study to positive or negative news frames on the same topic. The study showed that news repetition increased the strength of the negative frame unlike the positive frame. Also, the repetitive exposure to the frame leads to a framing effect that is more enduring than a single exposure (Lecheler, Keer, Schuck, & Hänggli, 2015). The effect of the positive frame took place but weakened over time as compared with those exposed to the positive frame only once (Lecheler, Keer, Schuck, & Hänggli, 2015).

Participants with moderate political knowledge “displayed the longest lasting framing effects” (Lecheler, Keer, Schuck, & Hänggli, 2015) while participants with less political knowledge were mostly affected by the frame in the short-term. Participants with high political knowledge were affected by the frame too but they tended to reject the argument as they have more ability to “encounter other information” through time (Lecheler, Keer, Schuck, & Hänggli, 2015). Both high and medium-knowledge participants were affected by repetitive exposure of positive frames while low-knowledge participants encountered a decrease in the effect after the repetition of a positive frame (Lecheler, Keer, Schuck, & Hänggli, 2015).
Framing theory overlaps with other theories. The term framing and priming, as well as agenda-setting, are used interchangeably (Chong & Druckman, 2007). Both framing and priming tell people “what to think about” and hence form their attitudes (Entman, 2010). Framing is the presentation of issues and events while the agenda-setting theory refers to the salience of these issues and events (De Vreese, 2005). According to Price and Tewksbury (1997), framing is perceived as an applicability effect while priming and agenda-setting are perceived as an accessibility effect (Lee, McLeod, & Shah, 2008).

IV.2 Frame Building and Frame Setting

Frame-building is the internal and external features that impact a news frame (De Vreese, 2005). The internal ones are the influences that affect journalists and their organizations’ framing of the news (De Vreese, 2005). Journalistic frames are affected by journalists’ “ideology, attitudes, and professional norms” (Scheufele, 1999). The frame is further affected by the political orientation of the media outlet transmitting the information (Scheufele, 1999) while the external factors include “political actors, authorities, interest groups and other elites.” Therefore, frames suggested by these groups, their ideologies and beliefs are reflected through journalists’ frames (Scheufele, 1999). Frame-building is the constant interaction between journalists, social movements and the elite (De Vreese, 2005). The elite want people to behave and think in a certain way and this is why they choose what to tell people while they obscure other information (Entman, 2010).

On the other hand, frame-setting is the interaction between the frame and the audiences’ pre-existing knowledge and attitudes (De Vreese, 2005). Frame-setting is also labeled as a second level of agenda-setting by McCombs and his colleagues as it is concerned with the salience of the issues (Scheufele, 1999). Frames can be on an individual level where a person’s attitude will change after being exposed to the frame and on the
societal level where the frame can affect “political socialization, decision-making, and collective actions” (De Vreese, 2005).

IV.3 Framing Effect

The framing effect refers to how different frames affect people’s attitudes and beliefs (Chong & Druckman, 2007) and how they comprehend the news frame (Lecheler, Keer, Schuck, & Hänggli, 2015). Framing effects and responding to the frame also differ from one individual to another (Entman, 2010). Opinions that people already hold also affect how responsive they are to the frame. For example, those with strong beliefs are less responsive to frames opposing their beliefs (Chong & Druckman, 2007).

Also, the level of peoples’ political knowledge influences the framing effect. People with high levels of political knowledge experience higher framing effects, according to some studies, but they are expected to resist the frame or evaluate it according to their existing beliefs as time passes (Lecheler, Keer, Schuck, & Hänggli, 2015). Also, people having low political knowledge will arguably be affected, but they will not build on the frame because they “process news frames superficially.” Thus, the initial frame effect will not be strengthened through repetition (Lecheler, Keer, Schuck, & Hänggli, 2015). However, moderately-aware individuals have strong framing effects as they build on repetition. They are the “most susceptible to media effects over time because “they pay enough attention,” but “lack the resources to resist” as Zaller (1992) argues. They are the most likely to show long-term framing effects (Lecheler, Keer, Schuck, & Hänggli, 2015).

Framing is further a cognitive process which activates certain constructs where the “audience members use premises or guiding principles in information-processing and judgment tasks” as heuristics in order to form opinions or make judgments (Lee, McLeod & Shah, 2008). In other words, the information and knowledge stored in the minds of the audience before being exposed to the frame helps them either consciously or subconsciously
to determine how the new information, through the frame, will fit into their “understandings and feelings about the world” (Entman, 2010).

The frame effect takes place when the information is stored in the memory, retrieved and used as the audience is exposed to the frame (Chong & Druckman, 2007). The information should be accessible in the mind, which happens “through regular or recent exposure” to the message where the information becomes accessible to individuals in an unconscious and passive way (Chong & Druckman, 2007). Sometimes people build their opinions based on the accessible information and, at other times, they deliberately evaluate the information (Chong & Druckman, 2007).

There are three further ways which the audience uses to process the information. First is the “active processing” where the person seeks to find additional information believing that media messages are generally incomplete and are affected by the communicator. The second type is the “reflective integrated pondering.” People think about the message they are exposed to or they immerse into discussions with others to fully comprehend the message. Last, are the “selective scanners” who only skim through media messages and therefore they choose to be exposed to relevant information while they ignore irrelevant ones that do not interest them (Scheufele, 1999).

Another factor for framing effects to take place is applicability which is “the ‘goodness of fit’ between some stored knowledge and the attended features of a stimulus” (Lee, McLeod & Shah, 2008). Applicability grows when there is more “overlap between stored knowledge and the message stimulus” (Lee, McLeod & Shah, 2008).

Applicability will take place in two situations. First, if people are personally motivated, they will evaluate opposing beliefs that either instantly come to their minds or are proposed by the frame. Second, when they are exposed to competing considerations, they will be encouraged to deliberately engage in evaluation (Chong, & Druckman, 2007).
short, individuals form their beliefs from previous knowledge stored in their memory. “Only some beliefs become accessible at a given moment,” and from these accessible beliefs, some are considered solid or applicable to be appropriate for the subject they are evaluating (Chong, & Druckman, 2007). “Framing can work on all three levels, by making new beliefs available about an issue, making certain available beliefs accessible, or making beliefs applicable or “strong” in people’s evaluation” (Chong, & Druckman, 2007).

It is important to note that knowledge and information will be retrieved if the amount of both applicability and accessibility are adequate, though not all the retrieved information will be used to make judgments (Lee, McLeod & Shah, 2008). In addition, “strength, repetition, a competitive environment, and individual motivation” are factors that should be present for a frame effect to take place (Chong, & Druckman, 2007). Credible sources are also one of the factors that constitute a strong frame (Chong & Druckman, 2007).

IV.4 Agenda-Setting Theory

Agenda-setting is an important aspect of democracy as it is linked with public opinion. Besides, “attention, consensus and problem-solving” are some terms associated with public opinion (Moon, 2008). The media directs citizens’ attention to some issues or problems, and consequently, creates consensus among the audience about how vital those issues or problems are (Moon, 2008). Therefore, citizens are encouraged to solve these problems and this is generally referred to as “civic engagement” (Moon, 2008).

The salience of news and the capability of influencing the public agenda is called the “agenda-setting role of the news media.” Journalists have the ability to influence public opinion through bringing certain issues into peoples’ attention by increasing their salience in the news (McCombs & Reynolds, 2009). Selected issues are repeatedly and prominently portrayed in the media which makes people think they are more important than other issues (Wu & Coleman, 2009). However, different researchers extended agenda-setting effects to
affect opinions, feelings and attitudes (Moon, 2008). The theory mainly implies that the
media creates the salience of issues in the public perception, and decides what topics people
think about (Sharma, 2012). “Lasswell believed that the media plays a critical role in
directing our attention to issues” to create “a correlation of attention on certain issues by the
media, the public and policymakers at the same time” (Moon, 2008).

As agenda-setting is related to directing the public opinion through the salience of the
issues, it becomes relevant to this research as it will examine the frequency of hate speech
used in the media and therefore directs the audience to hate certain groups or individuals.
Also, the study examines whether hate speech victims change according to the ruling
government or not, which will show whether the newspapers are affected by the
governmental agenda or not.

Walter Lippman argued that there is a difference between reality and the image in
people’s mind (Tan & Weaver, 2009). In the early 1920s, he declared that public opinion
responds to the “pseudo-environment” which is created by the news; in other words, peoples’
opinions and perspectives are based on what the media exposes them to (McCombs &
Reynolds, 2009). Lippman’s argument was later supported when McCombs and Shaw
surveyed undecided voters during the presidential elections in Chapel Hill, North Carolina
and studied whether “the media can set the public agenda.” They found a high “correlation
between the people’s agenda and the total news agenda” (McCombs & Reynolds, 2009). Later,
hundreds of empirical studies also supported the connotation of the agenda-setting
effects: what the media stresses, the public stresses too (Moon, 2008). McCombs and Shaw
also found that there is a very close association between the media and the public agenda on
issues related to “foreign policy, law and order, economics, public welfare and civil rights”
(Besova & Cooley 2009).
There are different factors that set the agenda including social ideologies and the psychology of journalists, politicians, public officials, public relations practitioners and other individuals including the presidents (McCombs & Reynolds, 2009). For example, state media depends on information from the government which makes it reflect its agenda (Tan & Weaver, 2009).

There is also a factor called “inter-media agenda-setting” which is the influence of different media outlets on each other (McCombs & Reynolds, 2009). For example, when a major news outlet publishes something, other media outlets follow and do the same. Also, websites sometimes have an impact on traditional media (McCombs & Reynolds, 2009). Some studies even found that op-ed pages in major newspapers were influenced by blog-activism (McCombs & Reynolds, 2009).

**IV.5 Agenda Setting Attributes and Levels**

The agenda-setting theory is further explained through objects and attributes. The objects in agenda setting are generally “public issues.” These objects fight to gain attention, and each object (e.g. candidates) has its various “attributes” (e.g. the image) which are characteristics that describe these issues (McCombs & Reynolds, 2009). Attributes are a mixture between the agenda-setting theory and framing theory (Besova & Cooley, 2009). Both objects and their attributes differ in their salience and are powerful tools for agenda setting (McCombs & Reynolds, 2009).

‘Attributes’ have two different dimensions, the “cognitive component” which is the information that describes the objects and the “affective component” which refers to the positive, neutral, or negative tone that describes the objects in the media (McCombs & Reynolds, 2009); the affective component focuses on the emotional qualities of attributes” (Wu & Coleman, 2009) just as framing negative attributes leads people to think negatively about the object (Besova & Cooley, 2009). Attributes in agenda-setting further indicate that
the media does not only tell us “what to think,” but also how to think (Besova & Cooley, 2009), exactly like the framing theory.

There are two levels of agenda-setting; the first level refers to the salience of issues and the quantity of coverage of a certain issue, suggesting that the media chooses the subjects that the audience will be aware of (Wu & Coleman, 2009).

Priming is an effect of the first level of agenda-setting (McCombs & Reynolds, 2009). Priming is when the audience makes decisions based on information available while making the judgment instead of going through a cognitive analysis of the stored information (McCombs & Reynolds, 2009). Priming also implies that the salience of issues affects people’s assessment of public figures, and has an important role in affecting people’s behavior and attitude (Moon, 2008).

The second level of agenda-setting refers to the attributes and how journalists frame the object’s characteristics (McCombs & Reynolds, 2009). The attributes of objects can be highlighted in certain ways that affect its salience (Sharma, 2012). The implication of attributes in agenda-setting overlap with the main idea of framing theory; however, as discussed before, the major difference between framing theory and agenda-setting theory is accessibility, which is linked with agenda-setting and applicability which is linked with framing (McCombs & Reynolds, 2009). In addition, attribute priming is the effect of the second level of agenda setting (McCombs & Reynolds, 2009).

IV.6 Need for Orientation

The effects of agenda-setting depend on how familiar people are with the subject (Besova & Cooley, 2009). Obtrusive and unobtrusive issues are referred to in order to justify people’s familiarity with the subject and their potential ‘need for orientation.’

The term “need for orientation” was coined by Maxwell, McCombs and Weaver in the early 1970s (McCombs, Shaw, & Weaver, 2014) based on the cognitive mapping theory
contributed by Psychologist Edward Tolman, which is similar to Lippman’s argument that “we form maps in our minds to help us navigate our external environment” (McCombs & Reynolds, 2009). The term “need for orientation” refers to the fact that individuals need to be acquainted with their physical and cognitive surroundings (McCombs, Shaw, & Weaver, 2014).

Besides the media, there are other factors which help people gain information like direct personal experience. These are called “obtrusive issues” (McCombs & Reynolds, 2009). For example, when people experience price soaring, they do not need the media to tell them so. On the other hand, people need the media to help them understand some issues that they cannot have direct personal experience with. These are the “unobtrusive issues” (McCombs & Reynolds, 2009). Sometimes, issues can be both obtrusive and unobtrusive depending on an individual’s experiences (McCombs & Reynolds, 2009).

If the issue is irrelevant (unobtrusive) to individuals, then the need for orientation will decrease while, if the issue is relevant or obtrusive but the individual’s uncertainty level is low, then the need for orientation is moderate (McCombs & Reynolds, 2009). If both relevance and uncertainty are high, then the need for orientation will be high too (McCombs & Reynolds, 2009). This means that when the need for orientation increases, the effect of agenda-setting will increase too and agenda-setting is stronger when it addresses unobtrusive issues (McCombs & Reynolds, 2009).

Matthes (2006) conducted a study and in it, he suggested that the “need for cognition” is a predictor for the need of orientation along with relevance. According to the study, there are at least three separate types of “Need for Orientation” toward issues, facts, and journalistic evaluations” (McCombs, Shaw, & Weaver, 2014).

It was further found that passive media users have less need for orientation than active media users while “moderate-active need for orientation users, (high relevance and low
uncertainty) use partisan media more than those with a high level of need for orientation, (high relevance and high uncertainty)” (McCombs, Shaw, & Weaver, 2014). Therefore, it is assumed that individuals with a “moderate-active” level of need for orientation might be seeking certain conclusions (directional goals) while individuals with a high level of need for orientation seek accurate conclusions (accuracy goals) (McCombs, Shaw, & Weaver, 2014). In addition, individuals “with a low and moderate-passive (low relevance and high uncertainty)” need for orientation level interpret media messages in a passive way and they are not regular users of the media which consequently limits their agenda-setting effects (McCombs, Shaw, & Weaver, 2014). On the other hand, individuals with a high and “moderate-active” need for orientation level are more active in seeking mediated messages and are less vulnerable to accessibility biases.

Individuals with a “moderate-active” need for orientation are attracted to partisan media which results in “high first-and second-level agenda-setting effects” while individuals with high need for orientation are attracted to mainstream media that have less partisanship, which results in “strong first-level” (object) agenda-setting effects, but only moderate second-level (attribute) effects” (McCombs, Shaw, & Weaver, 2014).

Generally, it was found that the more the media can focus on a certain object, the more people will form opinions about it. Also, the salience of these objects and their attributes affect opinions (McCombs & Reynolds, 2009). The effects of agenda-setting can be concluded by what research supports, namely “what the public thinks about something can be extended to what the public does about something” (Moon, 2008).
Chapter V

METHODOLOGY

V.1 Research Questions

1. Is there hate speech in the Egyptian Arabic language newspapers and what types of hate speech are used and to what extent (quantity)?
2. Who is the source of hate speech?
3. Does the media practitioner try to combat the speech if it is used by the source?
4. Did the victims of hate speech differ according to different governments (Morsi’s, Mansour’s and Al-Sisi’s) and how?

This study will examine hate speech in the Egyptian media using the quantitative approach of content analysis. The study will examine the presence or absence of hate speech, the type of hate speech that is mostly used and those who use this speech (e.g. the sources or media practitioners) as well as who the major victims of hate speech are and if they changed according to the ruling government. The span of the study will be from June 2012 until June 2015.

V.2 Quantitative Approach: Content Analysis

Content analysis is one of the research approaches that is commonly used by mass media researchers because it is an effective way of examining media content (Wimmer & Dominick, 2011). There are different definitions of content analysis, among them is a definition by Walizer and Wienir (1978) which explains it as “any systematic procedure devised to examine the content of recorded information.” Another definition is presented by Kerlinger (2000) which states that it is a “method of studying and analyzing communication in a systematic, objective, and quantitative manner for the purpose of measuring variables” (Wimmer & Dominick, 2011). This means communication is analyzed through some procedures where “each item must have an equal chance of being included in the analysis”
and each item is treated equally and given an equal amount of time. Further objectivity means that the researcher should exclude all personal opinions and biases, and variables should be operationalized to avoid extreme variances if more than one researcher analyzed the same content (Wimmer & Dominick, 2011). Finally, the quantitative approach briefly means having accurate representation of the analysis instead of an approximate one (Wimmer & Dominick, 2011).

In hate speech sphere, content analysis also is used as an approach to investigate possible hate messages “within their social and political context to understand the meanings, motivations, and ideologies behind the messages” and to decipher the components of a message and its delivery (Lucas, 2014). Content analysis on hate speech is usually “labor-intensive” which is one of the reasons why usually “small sets of data” of around hundreds of messages are analyzed (Lucas, 2014). However, this study will investigate a bigger sample to analyze hate speech more deeply.

As there are different uses of content analysis according to Wimmer and Dominick (2011), this study aims to implement more than one of them. First is “describing communication content” where this study aims to describe whether the communicated messages include hate speech or not and how they developed or changed over the time span of the study, and who the sources of the speech are. Second is “assessing the image of particular groups in a society” where the study will investigate how different groups are targeted by hate speech. Finally, is “establishing a starting point for studies of media effects” as this study aims to be a starting point for further studies to understand the effects of hate speech on both the victims and the audience.
V.3 Defining the Universe

This study focused on analyzing newspapers because they have a prominent role in societies, they have strong effects and they attract broad audiences. Totalitarian governments that try to control and censor the media are attracted to certain media and not to the content. For example, books are not rigorously censored because they mainly attract the educated elites, unlike other media and daily newspapers (Webb, 2014). This shows that newspapers usually attract a wide audience. Newspapers also have prominent effects. For example, research found that the decline in newspaper readership is correlated with voter turnout (Moon, 2008) which means that newspapers have a prominent role in affecting peoples’ behavior. Also, Abdulla (2013) asserts that print media are the medium that sets the agenda for the society, which further indicates the importance of newspapers.

The papers under examination were the state-owned daily newspaper Al-Ahram, the independent daily newspaper Al-Masry Al-Youm and the partisan daily newspaper Al-Wafd. The choice of newspapers was designed to include different types of popular newspapers including state, independent, and partisan papers. The three newspapers were also chosen as they are the most widely read in Egypt. Al-Ahram is the top selling state-owned newspaper (Egypt Today, 2017). Al-Masry Al-Youm is the most successful and most widely read independent newspaper and Al-Wafd is among the partisan newspapers with the highest circulation (Allam, N/D). However, it is hard to know the exact circulation due to the lack of market transparency, according to Hisham Kassem (Berger, 2013).

The online copies were excluded because when hate speech is used by a newspaper and it stirs arguments and criticism either through social networks or opposing media outlets, it is sometimes permanently deleted from the online version.
The span of the study was from June 30, 2012 to June 30, 2015. This period starts when the ousted President Morsi became the President of Egypt, followed by former President Mansour and ending with the current President Al-Sisi’s rule. Morsi ruled for around 13 months starting from June 30, 2012 and ending on July 3, 2013. Mansour ruled for around 12 months starting from July 3, 2013 and ending on June 8, 2014. The current President Al-Sisi’s rule was examined for the period of around 12 months from June 8, 2014 to 30 June 2015. Only one year of Al-Sisi’s ruling period was examined despite the fact that he has been in office for a longer period to simply investigate the same length of time similar to what is examined for Morsi and Mansour as both stayed in office only one year.

The study’s starting point was when Morsi became the President, because as shown in the literature, media polarization increased during this period and was later deepened (Abdulla, 2014), which might increase hate speech usage.

V.4 Population (Sample)

This research used a composite week approach, because according to Wimmer and Dominick (2011), this technique is better than others while analyzing newspaper content.

The week was constructed based on Wimmer and Dominick’s (2011) explanation of the composite week. One day of the week was randomly chosen from the month, then this day was replaced by another from the upcoming month and so on until finally one week was fully constructed. For example, a Sunday was randomly chosen from the four different Sundays of the month followed by Monday from the upcoming month and so on until the week was constructed.

This paper sampled 12 issues each year as an efficient approach for analyzing large amounts of newspaper content. It did not increase the sample beyond the 12 issues because
according to Wimmer, Dominick (2011), this did not “significantly improve sampling accuracy.”

In addition, the front pages of each newspaper were analyzed mainly because front pages include the most prominent and salient news and summary of the news or feature stories inside the paper. Opinion articles and caricatures were excluded from the analysis because they were rarely found in the front pages. Also advertisements were excluded from the analysis because they were not based on news framing, which is the major scope of the study. The total number of front pages analyzed from the three papers were 111.

V.5 Unit of Analysis and Operationalization

The unit of analysis is the verbal speech uttered that shows the usage of hate speech while taking into consideration the context the speech was articulated through. The unit of analysis is also based on the literature review and previous research examined hate speech.

Operational definitions are constructed to avoid any potential bias by the coders and to minimize subjectivity.

- **Hate speech:** This term refers to “incitement to violence, discrimination and to rejecting others” (Eissa, Elias & Kasseb, 2016). It also consists of the following variables:

- **Violence/ Incitement to violence:** This refers to Speech that advocates or incites to violence (Ianto-Petnehazi, 2012) such as threats, beating, robbery, rape and killing (executing) others (Besemer, 2012).

- **Slurs:** This refers to speech that contains insults or offensive terms (Ianto-Petnehazi, 2012) which target people based on their descriptive features like their race or sexual identity (Croom, 2013). Slurs used without mentioning people’s race, sexual identity
or descriptive features is not hate speech but a way of expressing anger (Croom, 2013).

- **Threats**: This refers to speech that includes threats without clearly inciting to violence such as, for example, “You should stop what your group is doing or else...”. “...our patience is coming to an end”, “You should not provoke us because...” (Ianto-Petnehazi, 2012).

- **Stereotypes**: This refers to generalizations about certain groups such as, for example, “we should be doubtful about group B because they want to destroy the country.” “All of group B are criminals.” “All members of group B hate/despise us.” “People of group B are immoral and they will corrupt our (A) youth.” “Group B has some despicable customs/traditions that threaten our society.” This implies that a certain group should not be trusted because of certain characteristics. “Group B are thieves so they should be sterilized” saying that all members of a certain group are terrorists (Ianto-Petnehazi, 2012)

- **Isolation and rejecting or excluding others**: This refers to the claim that a certain group is the original owner of the country and/or that the other group does not have the right to live in this country or abide by its traditions (Ianto-Petnehazi, 2012).

- **Conspiracy/Foreign interests/Enemies**: Implying that others “are part of a conspiracy against the country/society, serving some foreign or malicious interests” and implying, as well, that if a person is a member of a certain group or seeking rights for that group, or rights for its members or rights for its leaders then this person is an enemy of the state/people/society, and/or is a threat (Ianto-Petnehazi, 2012).

- **Shame of the country**: This refers to arguing that certain groups or individuals are a shame for the country and blaming them for the negative image of the country (Ianto-Petnehazi, 2012).
• **Discrimination:** This refers to any speech that discriminates, advocates, or rationalizes discrimination, which is “any differentiation, exclusion, restriction or preference based on group appartenence and any other criteria,” (Ianto-Petnehazi, 2012).

• **Race and ethnic group:** These are, for example, Bedouins and Nubians (Abdulla, 2013b).

• **Xenophobia:** This refers to speech that is spreading fear of foreigners (Sundstrom, & Kim, 2014) and inciting hatred or rejection of them, especially Westerners (Elliott et al., 2016).

• **Nationalist hate speech:** This refers to hate speech targeting nationalist citizens from Arab countries because of their opposing views on Egyptian politics Elliott et al., 2016).

• **Dehumanization:** Portraying others as animals, less human than others (sub-human), denying their identity as being independent and can make decisions (Haslam, 2006). Dehumanization takes the form of attacking other individuals or groups’ dignity as well as rationalizing injurious actions against them (Roginsky, & Tsesis, 2016).

• **Rationalizing injurious acts:** This refers to giving reasons and justifications for violence and incitement to violence.

• **Religious Minorities:** These are, for example, Christians, Jews, Baha’is (Abdulla, 2013b).

• **Religious extremism:** This refers to threatening others and limiting their rights based on religious arguments (Ianto-Petnehazi, 2012).
V.6 Inter-coder Reliability

The coding of this research was conducted by the researcher and an independent coder while a third independent coder was trained and introduced to the operational definitions to measure inter-coder reliability. A random subsample was chosen out of the whole sample for the inter-code reliability, where a percentage was chosen from the original two coders’ sample and was compared with the third coder’ responses. Finally inter-coder reliability was calculated using Holsti (1969) formula $\frac{2 (m)}{n_1+n_2}$ which is used with nominal data (Wimmer & Dominick, 2011). The “$M$ is the number of coding decisions on which two coders agree, and $N_1$ and $N_2$ are the total number of coding decisions by the first and second coder, respectively” (Wimmer & Dominick, 2011).

The total number of texts which compared between the first two coders and the third coder is 77 and the coding decisions agreed upon are 75. Coding decisions $\frac{2 (75)}{77+77} = 0.975$ hence the median equals 97%, therefore the inter-coder reliability found is high and shows that the research results is reliable.
Chapter VI

FINDINGS AND DISCUSSION

VI.1 Results Overview

The results of this content analysis are based on the analysis of 111 front pages of Al-Ahram, Al-Masry Al-Youm, and Al-Wafd newspapers. The total number of texts analyzed is 1127 divided between news stories, headlines, headlines with subtitles, feature stories, and articles. The time frame of the study starts from June 2012 until June 2015.

The analyses were divided first by determining whether the text includes hate speech or not, based on the aforementioned definitions. If no hate speech was found, the text was excluded. If hate speech was found, the text was further analyzed to find which type of hate speech is used, who the source of the hate speech is, who the target of the hate speech is, and if the writer tried to fight hate speech through opposing it or interviewing opposing sources or not. Also, sometimes the input of the coding was “nuanced,” which means that the text was leaning toward hate speech but there was no clear hate speech type used.

An example of nuanced hate speech was describing how Morsi’s wife was travelling to Alexandria and was staying in Al-Montazah palace to avoid protests surrounding Al-Ouroba palace in Cairo and to avoid hot weather. The news added that Muslim Brotherhood members were protecting her and the palace. The news item also added that Morsi will spend the last ten days of Ramadan in Al-Montaza palace. The story explained in details how they were spending their time in a relaxing and luxurious environment. The story was considered as nuanced hate speech because there was no clear hate speech type; however, the news was not supported by any facts or name of source and was framed in a provocative way especially that, during this period, there were many protests by different sects in the society.
VI.2 Analysis and Discussion

RQ1: Is there hate speech in Egyptian newspapers, to what extent (quantity) and what types of hate speech are used?

**Hate speech usage:** Hate speech was found more in the privately-owned Al-Masry Al-Youm newspaper followed by Al-Wafd party newspaper, and finally by the state-owned Al-Ahram newspaper. Since hate speech naturally has negative implications, it is clear that the framing and attributes of text including hate speech are negative. The results further show that state-owned newspapers are more careful when using hate speech, unlike the privately-owned Al-Masry Al-Youm and the party newspaper Al-Wafd. Similarly, Al-Sawt Al-Hurr’s study also showed that state-media used hate speech the least as the state-owned daily newspaper, Al-Gomhouria used hate speech for only 3% of its content.

The sample used during the time span of the study contained 3.6% of direct hate speech and 2.5% of nuanced hate speech. On the other hand, 93.8% of the analyzed text did not use hate speech. Al-Masry Al-Youm newspaper sample contained 4.6% of hate speech, Al-Ahram newspaper sample contained 2.6% of hate and Al-Wafd newspaper sample contained 3.8% of hate speech. Furthermore, the nuanced hate speech was found as follows: Al-Masry Al-Youm sample contained 3.3% of nuanced hate speech, Al-Ahram sample contained 1.8% and Al-Wafd contained 2.4%.

The following paragraph will elaborate in detail the findings of the study according to the major theme of the text which was analyzed and a government’s ruling period, as the coding was divided according to the major theme of the text, being either Arab countries, Western countries, or Egyptian affairs.

**Arab countries:** Before discussing the findings of Arab countries as a major theme of the text it is important to note that sometimes there was political tensions between the Egyptian government and some Arab countries during the span of the study. Besides, political hate
speech also includes nationalist hate speech that targets Arab countries and Arab citizens (Elliott et al., 2016). Therefore, despite these tensions the text was considered hate speech when it uses any of the hate speech types discussed before. The text context, generalizations and unsupported accusations were also a key used to decide if the text should be considered hate speech or simply reporting and/or opinions.

Arab countries (and/or Arab citizens living in Egypt or abroad) was the major theme of the text for a total of 5.8% of the sample under Morsi’s rule. Hate speech used in Al-Ahram newspaper was 4.3% targeting Arab governments and considering them to be part of a conspiracy, foreign interests, or as enemies which shows that the majority of times, Arab countries was the major theme during Morsi’s ruling period, hate speech was used against them.

Al-Wafd newspaper used nuanced hate speech against Arab governments in 4.3% of its sample and no direct or nuanced hate speech was found in Al-Masry Al-Youm newspaper. Similar to Al-Ahram, the results show that Al-Wafd newspaper also targeted Arabs generally with nuanced hate speech in the majority of the text with the major theme of Arab countries.

Arab countries (and/or Arab citizens living in Egypt or abroad) were the major theme of the text for only 3.8% of the text during Mansour’s ruling period and no hate speech was also found in the whole sample. This shows that during this period media professionals were more keen not to use hate speech against Arabs in general.

The total of the text with the major theme of Arab countries (and/or Arab citizens living in Egypt or abroad) during Al-Sisi’s ruling period was 10.2%. Only 2.4% of hate speech was used in Al-Ahram newspaper targeting “other” (Hamas Leaders) and the hate speech type was discrimination. On the other hand, Al-Masry Al-Youm used 2.4% of nuanced hate speech generally directed against Arabs or Arab countries without specifically mentioning the country or the people, while it was once targeting Houthis. This figure shows
that during Al-Sisi’s ruling period, the media was more careful and reduced the use of hate speech against Arabs than during Morsi’s rule but less careful than during Mansour’s rule which did not use hate speech against Arabs.

**Western countries:** Western countries (and/or Western citizens living in Egypt or abroad) were the major theme of the text for 2.7% during Al-Sisi’s ruling period. Al-Wafd newspaper used hate speech for 9.1% of its sample. The type of hate speech was discrimination and the hate speech victim was general and was not specified. No direct or nuanced hate speech was found when Western countries were the major theme of the text under Morsi’s and Al-Sisi’s ruling period, which means that during this period media professional were more careful while using hate speech against Western countries than during Al-Sisi’s ruling period.

**Egyptian affairs:** The total number of Egyptian affairs text during Morsi’s ruling period was 83.4%. The total amount of hate speech used was 3.3%. Hate speech in Al-Ahram newspaper was 0.3%, 1.2% in Al-Masry Al-Youm newspaper, and 1.8% in Al-Wafd newspaper.

The total percentage of nuanced hate speech used was 3.6%. Al-Ahram used it for 0.3%, Al-Masry Al-Youm used it for 1.8%, and Al-Wafd used it for 1.5%.

The total number of Egyptian affairs as the major theme under Mansour’s rule was 87.7%. The total amount of hate speech used was 6.1%. Al-Ahram newspaper used it for 1.1%, Al-Masry Al-Youm for 3.2%, and Al-Wafd for 1.8%.

The total percentage of nuanced hate speech used during the same period was 2.2%. Al-Ahram used it for 1.1%, Al-Masry Al-Youm used it for 0.7% and Al-Wafd used nuanced hate speech for 0.4%.
Meanwhile, the total number of Egyptian affairs as the major theme during President Al-Sisi’s ruling period was 77.0% and hate speech was used for 2.5%. Al-Ahram newspaper used 1.3% of hate speech and 0.3% was used in Al-Masry Al-Youm newspaper and 0.9% was used in Al-Wafd newspaper. On the other hand, the total of nuanced hate speech was 2.2%: Al-Ahram newspaper used it for 0.6%, Al-Masry Al-Youm newspaper for 0.6%, and Al-Wafd newspaper for 0.9%.

Hate speech was used the most during Mansour’s ruling period followed by Morsi’s ruling period and finally Al-Sisi’s ruling period.

During Morsi’s ruling period most hate speech was found the most in Al-Wafd newspaper followed by Al-Masry Al-Youm newspaper and finally Al-Ahram newspaper. Nuanced hate speech was used the most in Al-Masry Al-Youm newspaper followed by Al-Wafd newspaper and finally in Al-Ahram newspaper.

During Mansour’s ruling period hate speech was found mostly in Al-Masry Al-Youm newspaper followed by Al-Wafd newspaper and finally Al-Ahram newspaper. Nuanced hate speech was used mostly in Al-Ahram newspaper followed by Al-Masry Al-Youm newspaper and finally Al-Wafd newspaper.

During Al-Sisi’s ruling period Al-Ahram newspaper used hate speech the most followed by Alwafd and finally Al-Masry Al-Youm newspaper. Nuanced hate speech was used the most in Al-Wafd newspaper followed by Al-Ahram newspaper and Al-Masry Youm newspaper who used it equally.

“Other” as a major theme: ‘Other’ was chosen when the major theme of the text was about other countries and not among the choices given in the codebook or about other topics not related to a specific country, such as, for example, entertainment, or religion.
“Other” was the major theme of the text for 4.8% of the sample. Hate speech was used by 1.9% under Morsi’s ruling period in Al-Wafd newspaper and 2.6% nuanced hate speech was used under Mansour’s rule in Al-Ahram newspaper and 1.8% hate speech was found in Al-Masry Al-Youm newspaper under Al-Sisi’s rule.

Types of hate speech

Stereotyping was the major type of hate speech found in the sample during the three successive governments, which means that the victims of hate speech were mostly subject to generalizations and prejudice as mentioned before in the literature review by Roginsky & Tsesis (2016). People targeted by generalization or stereotyping might believe allegations made against them (Ring, 2013). An example of stereotypical hate speech was considering a whole Islamists group as terrorists and accused them for a terrorist attack in Egypt. However, the news story did not support the accusation through any source or facts, also, there was no mention of official investigations. At the meantime, the same news story mentioned that another militant group announced their responsibility of the terrorist attack, but the news story still accused the Islamist group. Taking all this into consideration the news story was considered stereotypical mainly for generalizing against the group and considering all of them as terrorists without supporting the statement. Also, if the news story just mentioned that the attack was carried by terrorists without specifying a group, especially before the official investigations and any support of the accusation, it would have not been considered as hate speech. Another stereotypical hate message was considering all “revolutionaries as infidels.”

Threaten was also used during the rule of the three successive governments which means that hate speech sources did not clearly incite for violence but only threatened using words like “You should stop what your group is doing or else...”. “…our patience is coming
to an end” (Ianto-Petnehazi, 2012) and so on. An example, of threaten hate speech was saying “revenge is coming-up,” where the hate speech sources were implying that if their demands are not met they will revenge. Since, that they did not clearly mention or incite for violence the text was considered threaten.

Dehumanization was used during Morsi’s and Mansour’s governments. An example of Dehumanization was when an individual spitted on another’s photo and placed his shoes on it. Another example is when the hate speech source was saying “media professionals are such waste pipes that are overflowing.” Dehumanization takes the form of attacking other individuals or groups’ dignity (Roginsky, & Tsesis, 2016). The context of these messages was considered to be attacking the dignity of hate speech victims, especially that in the Arabic context it has negative meaning that degrades others dignity.

Religious extremism was only used during Morsi’s ruling period, which is clear since, during this period, the government was represented by the Muslim Brotherhood and there was polarization between Islamist and secularist media, according to El Issawi (2014). An example of religious extremism was saying that all “liberals and secularists are infidels; executing them for apostasy is a must.” The source of this hate message was attacking others based on religious arguments according to the source’s claim. As religious extremism refers to threatening others and limiting their rights based on religious arguments (Ianto-Petnehazi, 2012) this message was considered hate speech.

Discrimination was used during Mansour’s rule, which refers to any speech that discriminates, advocates, or rationalizes discrimination, which is “any differentiation, exclusion, restriction or preference based on group appartenance and any other criteria,” (Ianto-Petnehazi, 2012). The discriminative message used was saying that Americans should get out of Egypt, this message was considered discriminative because it calls for the
exclusion of a certain group from the country and might incite hate towards members of this group.

The sources of hate speech during Mansour’s and Al-Sisi’s ruling periods used the conspiracy/foreign interest/enemies type of hate speech, which suggests that hate speech victims were framed as people working against the country’s or society’s interests and serving foreign, evil interests against their own country. An example of this type of hate speech was considering those who call for protesting to be implementing a conspiracy that is supported by “international terrorist and Zionist groups.” This gives negative connotations that they are serving foreign and evil interests especially that the text used words that might have strong negative impact like “terrorism” and “Zionism” and the text was also not supported by any facts to support the claim.

In addition, using violence and isolation types of hate speech during Mansour’s and Al-Sisi’s ruling period shows the framing of hate messages was extreme against the victims and suggested that they do not have the right to live in the country and in some cases, violence against them was justified or even encouraged. An example of violence is when some protesters threatened revenge and assured that the country will witness a bloodbath while others were holding different discriminatory signs including one that states “whoever will burn our Holy Book, we will burn their Holy Book and heart.”

The following paragraphs will elaborate more on the types of hate speech used and their percentage.

Stereotyping (26.1%) is the major type of hate speech used during Morsi’s ruling period followed by dehumanization (13%), religious extremism (8.7%), and last is threaten (4.3%).
Al-Masry Al-Youm newspaper used stereotyping for 8.7% and Al-Wafd newspaper used it for 17.4%. Dehumanization was used in Al-Masry Al-Youm newspaper for 4.3% and in Al-Wafd newspaper by 8.7%. Religious extremism, however, was used in Al-Masry Al-Youm newspaper by 4.3% and Al-Wafd newspaper by 4.3%. Finally, threaten was used in 4.3% in Al-Masry Al-Youm newspaper’s sample.

The major type of hate speech used during Mansour’s ruling period was stereotype (47.8%), followed successively by threaten (13%), violence (13.0%), conspiracy, foreign interest, and enemies (8.7%), dehumanization (4.3%), discrimination (4.3%), isolation (4.3%), and other (4.3%) which was xenophobic hate speech against Americans.

Stereotype was used in Al-Ahram newspaper for 13.0%, Al-Masry Al-Youm 26.1%, and Al-Wafd newspaper 8.7%. Threaten were used in Al-Masry Al-Youm newspaper by 8.7% and in Al-Wafd newspaper by 4.3%. Violence was used in Al-Masry Al-Youm newspaper by 8.7% and 4.3% was used in Al-Wafd newspaper. “Conspiracy, foreign interest, and enemies” was used in Al-Wafd newspaper by 8.7%. At the same time, all the percentage of dehumanization was used by 4.3% in Al-Wafd newspaper. Also, all the percentage of discrimination was in Al-Masry Al-Youm newspaper by 4.3%, isolation in the same newspaper by 4.3% and the “other” xenophobic hate speech was also found in Al-Masry Al-Youm newspaper by 4.3%.

During Al-Sisi’s ruling period, stereotyping was the major hate speech used (33.3%) followed by conspiracy, foreign interest, and enemies (20.0%), then violence, threaten, and isolation were used equally by or for (6.7%).

Stereotypes were used by 26.7% in Al-Ahram newspaper and 6.7% in Al-Wafd newspaper. Violence was used by 6.7% in Al-Masry Al-Youm newspaper. Isolation was used
in Al-Wafd newspaper by 6.7% and threaten were used by 6.7% in Al-Masry Al-Youm newspaper. Conspiracy, foreign interest, and enemies were used by 20.0%, divided between Al-Ahram newspaper by 6.7% and was used in Al-Wafd newspaper by 13.3%.

**RQ2: Who is the source of hate speech?**

This question aims to show that newspapers are only the channel that transmits hate speech, while the source is not necessarily the journalist, but it may differ as hate speech sources might have an agenda that they seek to implement and have issues they want people to think about. As mentioned before, the agenda-setting theory suggests that there are different factors that set the agenda including social ideologies and the psychology of journalists, politicians, public officials, public relation practitioners and other individuals including the presidents (McCombs & Reynolds, 2009). This clarifies the fact that more than one person can be involved in setting the agenda, and therefore more than one person can be the source of hate speech.

However, the research results show that Egyptian journalists (including wire service professionals and reporters) were at the top of the list as hate speech sources in the three newspapers and during the ruling period of the three successive governments through the time span of the study which clarifies the fact that the majority of the people who were trying to impose hate are the journalists, followed by other sources.

As shown in “table 2”, this study found that Egyptian journalists used hate speech for 2.6%, followed by Egyptian governmental officials who used hate speech for 1%. Then Egyptian Islamists totaled 0.6% as the source of hate speech. Other Egyptian interviewee or quoted sources used hate speech for 0.4%, Egyptian religious scholars used hate speech for 0.2%, foreign journalists used it for 0.3%, foreign governmental officials used hate speech for 0.2%, foreign religious scholars used hate speech for 0.1%, other foreign interviewee or
quoted sources were the source for hate speech by 0.3% while other sources counted for 0.1% as the source of hate speech.

Source of hate speech according to ruling government

The major sources of hate speech were also Egyptian journalists during the rule of the three different governments followed by other sources that were different under each ruling government. This enforces the fact that Egyptian journalists are the major source in setting a hate agenda towards others, followed by other sources.

The major hate speech sources during Morsi’s ruling period were Egyptian journalists or wire service professionals (1.8%), followed by Egyptian Islamists (1.5%), Egyptian governmental officials (1%), and both Egyptian and foreign sources coded under ‘other interviewee’ or ‘quoted source’ were equal (0.5%), followed by foreign journalists, wire service professionals or reporters (0.3%), and finally by foreign governmental officials (0.3%).
The 1.8% of hate speech used by Egyptian journalists (wire service professionals, or reporters) are divided between 0.3% in Al-Masry Al-Youm newspaper and 1.5% in Al-Wafd newspaper. The 1.5% used by Egyptian Islamists are 0.8% in Al-Masry Al-Youm newspaper and 0.8% in Al-Wafd newspaper. On the other hand, the 1% hate speech used by Egyptian governmental officials was 0.3% in Al-Ahram newspaper and 0.8% in Al-Wafd newspaper. Meanwhile, Egyptian ‘interviewee or quoted sources’ were the source of hate speech only in Al-Masry Al-Youm newspaper and counted for 0.5%. Also, foreign interviewee sources were found as the source of hate speech by 0.5% in Al-Wafd newspaper. In addition, foreign governmental officials were the source of hate speech by 0.3% in Al-Ahram newspaper and finally foreign journalists, wire service professional or reporters were the source of hate speech by 0.3% in Al-Wafd newspaper.

During Mansour’s ruling period, the major source of hate speech was journalists (4.7%). These were followed by Egyptian governmental officials (1.6%) and finally, by Egyptian religious scholars, Egyptian Islamists, foreign interview sources, and other sources who were equally the source of hate speech (0.3%).

The 4.7% hate speech used by Egyptian journalists, wire service professionals, or reporters is divided as follows: 1.3% in Al-Ahram newspaper, 1.9% in Al-Masry Al-Youm newspaper, and 1.6% in Al-Wafd newspaper. The 1.6% hate messages used by Egyptian governmental officials are distributed between Al-Ahram newspaper by 0.6%, Al-Masry Al-Youm newspaper 0.6% and 0.3% in Al-Wafd newspaper. Both Egyptian religious scholars and Egyptian Islamists were the source of hate speech for 0.3% each in Al-Masry Al-Youm newspaper. Both Egyptian interviewee sources and foreign interviewee sources were the source of hate speech for 0.3% in Al-Ahram newspaper.
During Al-Sisi’s rule, Egyptian journalists were also at the top of the list of hate speech sources at 1.7%. They were followed by Egyptian governmental sources, other Egyptian interviewee or quoted sources at 0.5%. Finally, religious scholars, foreign governmental official, and foreign religious scholar followed at 0.2%.

The 1.7% of Egyptian journalists, wire service professionals, or reporters used hate speech by 1% in Al-Wafd newspaper, 0.5% in Al-Ahram newspaper and 0.2% in Al-Masry Al-Youm newspaper. In addition, Egyptian governmental sources used hate speech by 0.5% only in Al-Masry Al-Youm. The 0.5% of hate speech used by “other Egyptian interviewee sources” are divided by 0.2% in Al-Ahram newspaper and 0.2% in Al-Wafd newspaper. The 0.5% of hate speech used by foreign journalists, wire service professionals or reporters were used in Al-Ahram newspaper by 0.2% and in Al-Wafd newspaper by 0.2%. The hate speech used by foreign governmental officials found in Al-Ahram newspaper for 0.2%. Foreign religious scholars used hate speech by 0.2% in Al-Masry Al-Youm newspaper. Finally, Egyptian religious scholars used it for 0.2% in Al-Wafd newspaper.

In short, the results show that disseminating hate against others was an agenda item implemented by Morsi’s government generally as Egyptian Islamists and Egyptian governmental officials were the major source of hate speech after the journalists. However, it is important to note that Islamists were also the major targets of hate speech during this period. As mentioned in the literature review, despite the fact that the Muslim Brotherhood tried to control and manipulate the media but they faced difficulty in doing so as they were opposed by many.

Similarly, during Mansour’s ruling period, journalists came first and were followed by Egyptian governmental officials as the major source of hate speech, which also reinforces the fact that the government was trying to disseminate hate towards others. However,
Egyptian Islamists, and religious scholars were also equally the source of hate speech, which only supports the fact that hate speech is used by different sources to target their opposition.

Likewise, during Al-Sisi’s ruling period, Egyptian journalists were the major hate speech source, followed by Egyptian governmental sources and other Egyptian interviewee or quoted sources. This also supports the argument that the governmental agenda was leaning towards using hate speech against others.

RQ3: Does the media practitioner try to combat the speech if it is used by the source?

Since newspapers are the channel used to transmit hate speech, it is important to note that media professionals try to combat this speech. Even if the role of the media professionals is to deliver the message, they should also be keen to oppose it or interview other sources to oppose hate messages (Eissa, Kasseb & Elias, 2016). This is especially true because some journalists are used by “racist groups” to implement their “political propaganda,” which results in the media being used as a weapon for intolerance (White, ND). Despite the importance of combating hate speech, this study found that the media professionals generally did not try to combat hate speech. This result is easily predictable since the major sources of hate speech were the journalists themselves.

To explain this finding in more detail, journalists did not try to combat hate speech during 99.7% of the times when hate speech was used and they tried to combat hate speech only in 0.3% of the times when hate speech was used.

During Morsi’s ruling period, 99.5% of the times when hate speech was used, the journalists did not try to combat it and only in 0.5% of the stories that used hate speech did the journalists try to combat it. Journalists tried to combat hate speech in Al-Masry Al-Youm newspaper by 0.3% of the times and 0.3% of the times was in Al-Wafd newspaper. During Mansour’s ruling period, 100% of the stories that used hate speech were not opposed by the journalists. During Al-Sisi’s ruling period, journalists did not try to combat hate speech in 99.8% of the times when hate speech was used. However, journalists tried to combat hate speech only in 0.2% of the times and this was found in Al-Ahram newspaper.

This data is supported by the literature review which tackled the unprofessionalism of the media in Egypt which, as argued, can increase the use of hate speech with no clear attempts to fight it as shown by the results. Also, the polarization and politicization used by the media might encourage journalists to use hate speech. Unfortunately, the results even show that it is the journalists themselves who should advocate for human rights and freedom and yet, they can violate such rights through using hate speech, as the majority of hate speech sources were journalists and the majority of them did not try to fight hate speech when it was used by other sources.

**RQ4: Did the victims of hate speech differ according to different governments (Morsi, Mansour and Al-Sisi) and how?**

Islamists, protesters, oppositional parties or groups were targeted by hate speech during the rule of the three governments while liberal and/or secularist forces were targeted by hate speech only during Morsi’s and Al-Sisi’s ruling periods. Also, religious minorities, media professionals, Port Said citizens, and revolutionary forces and activists affiliated with the June 30 protests were the victims of hate speech during Morsi’s ruling period in some of the text. Ethnic groups were only targeted by hate speech during Al-Sisi’s ruling period. Ain-Shams University students in general, Syrians, a comedy TV presenter, American and Egyptian citizens and workers in American companies, restaurants and embassies in Egypt were the victims of hate speech in some of the text during Mansour’s ruling period.

Islamists were the victims of hate speech with the highest percentage during the rule of the three governments. Therefore, this study is similar to Zahra’s (2014) suggestion that the media in Egypt supported hatred against Islamists. Also, liberal and/or secularist political forces were targeted by hate speech during Morsi’s and Al-Sisi’s ruling periods. This enforces the argument that hate speech sources direct their hate messages towards those who
oppose them and that hate speech in the newspaper was not only targeting groups opposing the government.

This means that sometimes hate speech victims were the same during the rule of the three governments and sometimes they were different. However, it is clear that mainly oppositional groups and Islamists were the major targets of hate speech in the whole sample. It is also important to note that Islamists might be the major target of hate speech because, during the span of this study, many of the news items were about them.

Since oppositional groups were targeted by hate speech during the rule of the three successive governments, the results are in accordance with Elliott et al., (2016) who said that political hate speech is mainly directed against political groups due to their political views and targets Egyptian oppositional figures. The results also show that the agenda implemented during the time span of the study was to direct public opinion towards hating these groups and the groups were framed in a negative way which directs the audience to also think about them negatively. This is also supported by Zahra (2014) who said, as mentioned in the literature review, that one of the reasons for using hate speech is the competition to win among political parties and their belief that winning can only be achieved through getting rid of the other.

**Morsi:** During Morsi’s ruling period, the majority of hate speech victims were Islamists (13.0%) followed by liberal and/or secularist forces and protesters (8.7%). Also, opposing political parties were equally targeted by hate speech like religious minorities (4.3%). Other targets of hate speech were media practitioners, Port Said citizens, and revolutionary forces (generally and with no mention of affiliation or ideology), and nuanced hate speech targeted activists affiliated with the June 30 protests.
Mansour: Islamists were also the major target of hate speech during Mansour’s ruling period (52%). They were followed by protesters (8.7%), then opposing political parties (4.3%). Furthermore, some of the texts targeted Ain-Shams University students in general, Syrians, a Comedy TV presenter, American and Egyptian citizens and workers in American companies, restaurants and embassies in Egypt (4.3% each).

Al-Sisi: The major victims targeted by hate speech during Al-Sisi’s ruling period were Islamists (33.3%) followed by protesters (6.7%). Hate speech victims coded as “other” (13.3%) were oppositional groups in general and an initiative associated with a Muslim Brotherhood member that allegedly aims to resolve the conflict between MB and the government. Nuanced hate speech also targeted Islamists (28.6%), followed by liberal and secularist forces (14.3%), then by protesters, opposing political parties, and ethnic groups (14.3% each).

Further Data Details:

Morsi: Hate speech used against Islamists under Morsi’s ruling period was 13.0%. Out of this percentage, Al-Masry Al-Youm newspaper used hate speech against Islamists for 4.3% and Al-Wafd newspaper used 8.7%. On the other hand, the 8.7% of the hate speech was used against liberal and secularist forces as follows: 4.3% in Al-Masry Al-Youm newspaper and 4.3% in Al-Wafd newspaper. Also, 8.7% of hate speech targeted protesters in Al-Masry Al-Youm newspaper, while 4.3% of the hate speech targeted opposing political parties in the same newspaper. Finally, hate speech was used against religious minorities by 4.3% in Al-Wafd newspaper and targeted Christians.

The term “other” was chosen by the coders when the hate speech victims were not among the given choices and 17.4% of the hate speech was coded under ‘other.’
percentage, 13.0% was found in Al-Wafd newspaper and it targeted media practitioners, Port Said citizens, and revolutionary forces (in general with no mention of affiliation or ideology) and 4.3% was in Al-Ahram newspaper where the text was mainly about kidnappers and their supporters but the overall context the of the text was causing confusion between kidnappers and the opposition generally.

Most of the nuanced hate speech, 58.3%, used during Morsi’s ruling period was directed against Islamists: 25.0% in Al-Masry Al-Youm newspaper and 33.3% in Al-Wafd newspaper. Al-Masry Al-Youm directed 8.3% of the hate speech against activists affiliated with the June 30 protests and “other” was chosen for 8.3% in Al-Ahram newspaper and 16.7 in Al-Masry Al-Youm newspaper.

**Mansour:** Hate speech used against Islamists during Mansour’s ruling period was 52.2%. Out of this percentage, 4.3% was found in Al-Ahram newspaper, 26.1% in Al-Masry Al-Youm newspaper, and 21.7% in Al-Wafd newspaper. In addition, 8.7% of the hate speech was used against protesters as follows: 4.3% in Al-Masry Al-Youm newspaper and 4.3% in Al-Wafd newspaper. Hate speech that targeted opposing political parties in Al-Wafd newspaper was 4.3%. Also “other” was chosen as the target of hate speech by 26.1%. Out of this percentage, 8.7% was in Al-Ahram newspaper and the victims were Ain-Shams University students in general and Syrians who were equally targeted, both by 4.3%. ‘Other’ was further coded by 13% in Al-Masry Al-Youm newspaper: 4.3% of them were in Al-Wafd newspaper against the Egyptian comedian TV presenter, 4.3% about America and 4.3% about Egyptian citizens and workers in American companies, restaurants and embassies in Egypt.

On the other hand, the total number of nuanced hate speech acts that was used during Mansour’s ruling period was directed against Islamists by 66.7%. These were equally
targeted in Al-Ahram newspaper and Al-Masry Al-Youm newspaper by 33.3%. “Other” was chosen as the victims of nuanced hate speech by 16.7% in Al-Ahram newspaper.

**Al-Sisi:** The hate speech that targeted Islamists during Al-Sisi’s ruling period was 33.3% with 26.7% in Al-Ahram newspaper and 6.7% in Al-Masry Al-Youm newspaper. Hate speech that targeted protesters in Al-Wafd newspaper was 6.7% while 13.3% of hate speech was coded ‘other’; 6.7% in Al-Ahram newspaper targeted oppositional groups generally and 6.7% in Al-Wafd newspaper targeted an initiative associated with a Muslim Brotherhood member that allegedly aims to resolve the conflict between the Muslim Brotherhood and the government.

Islamists were targeted by nuanced hate speech by 28.6% with 14.3% in Al-Masry Al-Youm newspaper and 14.3% in Al-Wafd newspaper. Liberal and secularist forces were also targeted by 14.3% in Al-Masry Al-Youm newspaper. Ethnic groups were targeted in Al-Ahram newspaper by 14.3%. Protesters were also the victims of nuanced hate speech by 14.3% in Al-Masry Al-Youm newspaper as well as opposing political parties who were targeted by 14.3% in the same newspaper. “Other” was chosen for 28.6% in Al-Wafd newspaper.

**VI.3 Conclusion**

First, it is important to note that there is shortage of hate speech studies, especially in the Egyptian media. Besides, studies previously conducted about hate speech in Egypt focused on a short time span and analyzed samples that were different from the ones analyzed in this study; therefore, it was a challenge for this research to compare its results with previous studies. Also, different media and human rights organization reports focused on broadcast media and used hate speech examples more from broadcast than from newspapers.
This is probably due to the fact that broadcast has more apparent hate speech as it is disseminated to a wider audience as compared with newspapers. Hate speech is also widespread through social media and is probably more so than in traditional media. According to Ring (2013), the Internet is the most accessible media platform unlike traditional media, and any person with an Internet connection and a computer can transmit information easily. Ring (2013) adds that hate messages frequently appear in social media too. The nature of the Internet makes it easy for the messages to be transmitted around the world and it becomes permanent in the Internet unless the user decides to take the message offline and simply delete it (Holschuh, 2014). In spite of this, it was important to study newspapers due to their importance especially in setting the agenda and in affecting and influencing peoples’ behavior. In addition, using hate speech generally with limited or high percentage may have a negative impact on hate speech victims and the society as a whole.

The majority of hate speech found in this research is in the privately-owned Al-Masry Al-Youm newspaper, then the party-owned Al-Awafd newspaper, and finally in the state-owned Al-Ahram newspaper. As hate speech is used against some groups, this shows that negative effects of hate speech may occur.

Moreover, major types of hate speech found through the sample are stereotyping, threaten, dehumanization, religious extremism, discrimination, conspiracy/foreign interest/enemies, violence and isolation.

Also, the results showed that Egyptian journalists were at the top of the list of hate speech sources followed by other sources. Such results might suggest that the governmental agenda leans towards disseminating hate speech. However, also other sources including the opposition were sometimes the source of hate speech. Therefore, this study supports the argument that hate speech sources generally target groups opposing them, regardless of whether the source of hate speech is in power or not.
The major groups targeted by hate speech generally did not change through the three successive governments, as they were mainly Islamists, but in other cases, the victims were oppositional groups like protesters. Finally, journalists in general did not try to combat hate speech.

**VI.4 Proposed Solutions to Fight Hate Speech**

As suggested before, there is a lack in finding one unified definition of hate speech. Therefore, it is a challenge to find ways to combat hate speech. In addition, limitations on hate speech might affect freedom of expression and might be used by the governments against media professionals or citizens who try to voice their opinion through the media, therefore, this section will propose solutions that might be useful to fight hate speech, trying to avoid governmental laws.

As this study showed that journalists are the major hate speech source, it is important to provide solutions to fight hate speech by raising journalist’s awareness. Journalists might use hate speech due to the lack of professional and practical training, therefore, it is suggested that they receive training and learn more about hate speech, human rights, ethical and professional media standards. This could be done through universities, media organizations, or media civil society associations. As mentioned before by Zahra (2014), media practitioners should learn about human rights and should receive training on how to differentiate between freedom of speech and hate speech, which will help them to avoid the use of hate language.

Journalists might also use hate speech to implement their own agenda, or as a means to express their own opinion by using this speech against individuals or groups that they personally oppose. They could also use it to implement the newspaper agenda or even the governmental agenda. This is also due to the lack of professional and ethical awareness, therefore media training is important to raise media professional’s awareness on the
importance of objectivity and separating personal opinions from facts. Journalists and media professionals must also understand the negative effects of using hate speech and how it can harm individuals, society, or even lead to civil wars. Education is the most important tool to train people to avoid hate speech, because as Lenkova (1998) mentioned hate speech is caused by ignorance and lack of education. Therefore, educating media professionals is important to avoid hate speech. Zahra (2014) even suggests that hate speech topic should be addressed in schools which shows how important is education even from early stages.

Zahra (2014) mentioned that the media should have clear standards on its messages to avoid hate speech. This paper suggests that this could be implemented through media organizations who should clearly define the link between hate messages and free speech and media organizations should also have a clear code of ethics that media professionals must abide by. White (ND) further stresses that journalists must act according to the code of ethics and not only memorize it. Journalists can also use the code of ethics as a “checklist” especially when working with tight deadlines (White, ND).

Media organizations also have a role in raising awareness about accepting other’s opinions and cultures. As Zahra (2014) stated before, the media should provide time and space in the media outlets to encourage cultural debates and the acceptance of other’s opinions. Also, in some cases journalists might not even report about hate speech used by other sources if it might inflame violence. In such cases, journalists and media organizations should balance between reporting and informing people about what was said by the source and the consequences the hate message might cause. Also, if journalists decided to report about hate speech used by the source it is important to carefully and wisely choose the words and how to phrase and to frame the message and they should combat this hate message by another one opposing it to avoid any negative consequences of the hate speech.
One of the reasons that might encourage journalists to use hate speech is lack of self-regulations by journalists and media organizations or even being blamed after using hate speech. For example, when the TV anchor clearly used hate speech against Egyptian Christians, she continued working and the head of the news department at this time considered her incitement to violence as only being “politically emotional.” Limitations should be imposed by media organizations that should totally reject the use of hate speech, strictly prohibit and penalize it. Like media organizations, also, the Syndicate of Journalists and the Supreme Council for Media Regulation should play a role in coming-up with code of ethics and in setting limitations against the use of hate speech by defining what hate speech is and rejecting any kind of hate speech usage and at the same time, securing and protecting freedom of expression. As it is important to avoid any kind of impingement to freedom of expression also media professionals should cooperate in creating the code of ethics or vote for it to ensure that it will not affect their reporting and freedom of expression.

Self regulation is also important for media organizations as they should view their work to make sure that their messages do not include hate speech, and the media organizations should refuse to use any kind of hate speech. In addition, as the role of media professionals is being objective in delivering the message, they should also be keen not to cause harm. Therefore, journalists should learn how to fight hate speech when it is used by sources through, opposing the hate speech used by interviewing other sources to oppose it. This is especially important because the results of the study showed that media professionals did not try to fight or oppose hate speech used by the sources. Sikorskaya and Gafarova (2014) also mentioned that most of the experts believe that hate speech must be encountered by another kind of speech that aims to inform the audience and eliminate deception, bias, stereotypes and fear of others which will affect public opinion positively. This is also
supported by the marketplace idea, which suggests that when different opinions are presented the public will choose the truth.

Civil society associations and media organizations should cooperate to fight hate speech. They should also start social campaigns to raise awareness against hate speech and this campaign can be disseminated by different media outlets. Also, the audience might have a role through sending reports to the civil society about hate speech. The civil society can investigate further and contact the journalist or media outlet to remove the hate message and apologize to the public. This way hate speech awareness will not only be limited to journalists and media organizations but also the public. In addition, they should also encourage communication with those perceived as “the other” and encourage them to speak-up about themselves to eliminate stereotypes about them.
Chapter VII

RECOMMENDATIONS AND LIMITATIONS

VII.1 Recommendations

As there is a lack of hate speech studies in Egypt, further studies should be conducted to have deeper understanding of the phenomena.

This study used content analysis, which only describes the presence of hate speech and how groups are framed in the different periods of the rule of presidents. It aims to be a starting point for further studies to understand the effects and impact of hate speech on both the victims and the audience. It is also important to understand whether hate speech has an impact on the newspapers readers and victims or not. Therefore, further studies should include surveys and in-depth interviews to understand the possible effects of hate messages on individuals and groups targeted by those messages, to understand, as well, how hate messages affect the audience exposed to them and understand their attitudes and perspective towards these messages and hate speech victims. For example, does hate messages alter the audience behavior, attitude, and perspective towards the victims or not?

The study showed an overview of hate speech in Egyptian newspapers through analyzing only the front pages. However, further studies might investigate a narrower sample of the same study period to have a clearer view of the phenomenon. For example, more stories and articles should be analyzed to understand if there is hate speech in the story itself or not, as front pages mostly consist of overviews of the major news only. Besides articles should be examined to know if opinion articles writers use hate speech or not.

While the main focus of this study is newspapers due to their importance in attracting a wide audience (Webb, 2014), in setting the public agenda (Abdulla, 2013), and in affecting people’s behavior, it is also important to analyze other media outlets too. Including online news websites and TV and radio in order to explore wider and different types of news stories
that is disseminated to wider audience especially with the literacy rates in Egypt. Different segments should be analyzed including news programs and talk shows, which will help exploring more topics. In addition, the same time frame should be explored through conducting a comparative study between newspapers and broadcast to understand the overall role of the media, rather than newspapers only. It is further important to investigate hate speech in social media and understand how hate speech in traditional media is reflected in the social media.

VII.2 Limitations

This research used few previous studies to have an overview of hate speech studies and how are they conducted. However, due to the shortage of research on hate speech in Egypt, this study was challenged to find general data and examples from previous concrete scientific studies to follow their steps as a guideline for a new study and as a way to avoid challenges and difficulties previous researchers faced.

In addition, there are different factors that might affect the results of the study, which discussed next and the ways the researcher and coders tried to overcome.

Due to the lack of a unified definition of hate speech, what is considered hate speech in one study could be considered opinion in another one, so if the same sample is analyzed by different researchers the outcome might differ, depending on each researchers’ choice of operational definitions. The context of the speech was always taken into consideration while analyzing the newspapers to avoid confusing hate speech with news or expression of opinions. Therefore, what is considered hate speech in one text might not be considered hate speech in another one.

As discussed earlier, it is important to notice that after the 25th of January revolution, the media scene was generally unprofessional (El Issawi, 2014). It witnessed polarization and politicization (Elliott et al., 2016). The media under Morsi’s ruling period was polarized
(Abdulla, 2014) while, after his isolation, the majority of private and state-owned media outlets were advocating for “pro-military propaganda” and extreme patriotism, according to Webb (2014). However, the coders tried not to confuse hate speech with any bias, unprofessionalism, or simply freedom of expression especially that, as argued in the literature review, there is already a debate as to whether hate speech is considered freedom of expression or not and sometimes both might overlap. Also, operational definitions and generalization were the main keys to differentiate between bias, unprofessionalism and hate speech.

The time period of this study was also critical as it witnessed political turmoil, imbalance and the Egyptian streets witnessed different protests and some showed anger towards the succeeding governments, which was sometimes reflected in the media. Newspapers covered these protests and had their own negative expressions in describing certain political scenes or figures, as well as sources and opinion writers who sometimes expressed their anger. Coders were keen not to confuse the negative framing of certain events and expressing anger towards political groups or individuals with hate speech, by adhering to the operational definition.
